Anthropology

Anthropology, provides its readers with a comprehensive and scientific introduction to the four fields of anthropology. It helps them understand humans in all their variety, and why such variety exists. This new thirteenth edition places an increased emphasis on immigration, migration and globalization. It also showcases how anthropological skill sets can be applied beyond academia.

Physical Anthropology and Archaeology, Third Canadian Edition

The Handbook of Methods in Cultural Anthropology, now in its second edition, maintains a strong benchmark for understanding the scope of contemporary anthropological field methods. Avoiding divisive debates over science and humanism, the contributors draw upon both traditions to explore fieldwork in practice. The second edition also reflects major developments of the past decade, including: the rising prominence of mixed methods, the emergence of new technologies, and evolving views on ethnographic writing. Spanning the chain of research, from designing a project through methods of data collection and interpretive analysis, the Handbook features new chapters on ethnography of online communities, social survey research, and network and geospatial analysis.

Physical Anthropology and Archaeology, Fourth Canadian Edition

Human Culture, Books a la Carte Edition

The Routledge Handbook of Medical Anthropology provides a contemporary overview of the key themes in medical anthropology. In this exciting departure from conventional handbooks, compendia and encyclopedias, the three editors have written the core chapters of the volume, and in so doing, invite the reader to reflect on the ethnographic richness and theoretical contributions of research on the clinic and the field, bioscience and medical research, infectious and non-communicable diseases, biomedicine, complementary and alternative modalities, structural violence and vulnerability, gender and ageing, reproduction and sexuality. As a way of illustrating the themes, a rich variety of case studies are included, presented by over 60 authors from around the world, reflecting the diverse cultural contexts in which people experience health, illness, and healing. Each chapter and its case studies are introduced by a photograph, reflecting medical and visual anthropological responses to inequality and vulnerability. An

indispensable reference in this fastest growing area of anthropological study, The Routledge Handbook of Medical Anthropology is a unique and innovative contribution to the field.

The Comparative Approach in Evolutionary Anthropology and Biology

Now with SAGE Publishing! Cultural Anthropology: A Global Perspective by Raymond R. Scupin delves into both classic and current research in the field, reflecting a commitment to anthropology's holistic and integrative approach. This text illuminates how the four core subfields of anthropology—biological anthropology, archaeology, linguistics, and cultural anthropology—together yield a comprehensive understanding of humanity. In examining anthropological research, this text often refers to research conducted in other fields, sparking the critical imagination that brings the learning process to life.

this clearly written, comprehensive and engaging text has risen to become a market leader. Its balanced coverage of physical anthropology and archaeology helps students understand what humans are and were like, and how they got to be that way. The new fourth edition has been updated with all-new Canadian and international research. A visual revitalization has been accomplished with more photos, new Dorling Kindersley maps, and a handy skeleton diagram inside the cover for quick reference. This popular text will bring a unique perspective to the study of physical anthropology.

Human Evolution and Culture

[In this book, the authors] are interested not only in what humans are and were like; [but they are] also interested in why they got to be that way, in all their variety. When there are alternative explanations, [the authors] try to communicate the necessity to evaluate them logically as well as on the basis of the available evidence. Throughout the book, [they] try to communicate that no idea, including ideas put forward in textbooks, should be accepted even tentatively without supporting tests that could have gone the other way. -Pref.

Human Culture

Medical practitioners and the ordinary citizen are becoming more aware that we need to understand cultural variation in medical belief and practice. The more we know how health and disease are managed in different cultures, the more we can recognize what is "culture bound" in our own medical belief and practice. The Encyclopedia of Medical Anthropology is unique because it is the first reference work to describe the cultural practices relevant to health in the world's cultures and to provide an overview of important topics in medical anthropology. No other single reference work comes close to matching the depth and breadth of information on the varying cultural background of health and illness around the world. More than 100 experts - anthropologists and other social scientists - have

contributed their firsthand experience of medical cultures from around the world.

Human Culture

Without ethnography, cross-cultural comparison would not be possible. But without cross-cultural comparison, we would know nothing of what may be universal or variable across human cultures, or why variation exists. Cross-Cultural Research Methods is an introductory teaching tool that shows students and potential researchers how to describe, compare, and analyze patterns that occur in different cultures, that is, how to form and test anthropological, sociological, psychological, medical, or political hypotheses about cultural variation.

Cross-Cultural Research Methods

Writing and teaching across cultures and disciplines makes the act of comparison inevitable. Comparative theory and methods of comparative literature and cultural anthropology have permeated the humanities as they engage more centrally with the cultural flows and circulation of past and present globalization. How do scholars make ethically and politically responsible comparisons without assuming that their own values and norms are the standard by which other cultures should be measured? Comparison expands upon a special issue of the journal *New Literary History*, which analyzed theories and methodologies of comparison. Six new essays from senior scholars of transnational and postcolonial studies complement the original ten pieces. The work of Gayatri Chakravorty Spivak, Ella Shohat, Robert Stam, R. Radhakrishnan, Bruce Robbins, Ania Loomba, Haun Saussy, Linda Gordon, Walter D. Mignolo, Shu-mei Shih, and Pheng Cheah are included with contributions by anthropologists Caroline B. Brettell and Richard Handler. Historical periods discussed range from the early modern to the contemporary and geographical regions that encompass the globe. Ultimately, *Comparison* argues for the importance of greater self-reflexivity about the politics and methods of comparison in teaching and in research.

Lazy, Crazy, and Disgusting

An Anthropology of Biomedicine is an exciting new introduction to biomedicine and its global implications. Focusing on the ways in which the application of biomedical technologies bring about radical changes to societies at large, cultural anthropologist Margaret Lock and her co-author physician and medical

anthropologist Vinh-Kim Nguyen develop and integrate the thesis that the human body in health and illness is the elusive product of nature and culture that refuses to be pinned down. Introduces biomedicine from an anthropological perspective, exploring the entanglement of material bodies with history, environment, culture, and politics Develops and integrates an original theory: that the human body in health and illness is not an ontological given but a moveable, malleable entity Makes extensive use of historical and contemporary ethnographic materials around the globe to illustrate the importance of this methodological approach Integrates key new research data with more classical material, covering the management of epidemics, famines, fertility and birth, by military doctors from colonial times on Uses numerous case studies to illustrate concepts such as the global commodification of human bodies and body parts, modern forms of population, and the extension of biomedical technologies into domestic and intimate domains Winner of the 2010 Prose Award for Archaeology and Anthropology

Anthropology

Comparison is fundamental to evolutionary anthropology. When scientists study chimpanzee cognition, for example, they compare chimp performance on cognitive tasks to the performance of human children on the same tasks. And when new fossils are found, such as those of the tiny humans of Flores, scientists compare these remains to other fossils and contemporary humans. Comparison provides a

way to draw general inferences about the evolution of traits and therefore has long been the cornerstone of efforts to understand biological and cultural diversity. Individual studies of fossilized remains, living species, or human populations are the essential units of analysis in a comparative study; bringing these elements into a broader comparative framework allows the puzzle pieces to fall into place, creating a means of testing adaptive hypotheses and generating new ones. With this book, Charles L. Nunn intends to ensure that evolutionary anthropologists and organismal biologists have the tools to realize the potential of comparative research. Nunn provides a wide-ranging investigation of the comparative foundations of evolutionary anthropology in past and present research, including studies of animal behavior, biodiversity, linguistic evolution, allometry, and cross-cultural variation. He also points the way to the future, exploring the new phylogeny-based comparative approaches and offering a how-to manual for scientists who wish to incorporate these new methods into their research.

HUMANITY: AN INTRODUCTION TO CULTURAL ANTHROPOLOGY, Eleventh Edition, offers a solid framework centered on globalization and culture change. The text's engaging narrative provides new ways of looking at many of the challenges facing the world in this century, as students examine ethnic conflicts, globalization of culture and language, recent debates about gay marriage, increasing inequalities, population growth, hunger, and the survival of indigenous cultures. Throughout this highly acclaimed work, Peoples and Bailey explore the diversity of humanity and clearly demonstrate why an appreciation and tolerance of cultural differences is critical today. Cultural Anthropology

Stigma is a dehumanizing process, a method of shaming and blaming that is

embedded in our beliefs about who does and does not have value within society. In *Lazy, Crazy, and Disgusting*, medical anthropologists Alexandra Brewis and Amber Wutich explore another side of the issue: the startling fact that well-intentioned public health campaigns can create new and sometimes damaging stigma, even when they are successful. Brewis and Wutich present a novel, synthetic argument about how stigmas act as a massive driver of global disease and suffering, killing or sickening billions every year. They focus on three of the most complex, difficult-to-fix global health efforts: bringing sanitation to all, treating mental illness, and preventing obesity. They explain how and why humans so readily stigmatize, how this derails ongoing public health efforts, and why this process invariably hurts people who are already at risk. They also explore how new stigmas enter global health so easily and consider why destigmatization is so very difficult. Finally, the book offers potential solutions that may be able to prevent, challenge, and fix stigma. Stigma elimination, Brewis and Wutich conclude, must be recognized as a necessary and core component of all global health efforts. Drawing on the authors' keen observations and decades of fieldwork, *Lazy, Crazy, and Disgusting* combines a wide array of ethnographic evidence from around the globe to demonstrate conclusively how stigma undermines global health's basic goals to create both health and justice.

Cultural Anthropology

Immigration is a topic that is as important among anthropologists as it is the general public. Almost every culture has experienced adaptation and assimilation when immigrating to a new country and culture; usually leaving for what is perceived as a "better life". Not only does this diaspora change the country of adoption, but also the country of origin. Many large nations in the world have absorbed, and continue to absorb, large numbers of immigrants. The foreseeable

future will see a continuation of large-scale immigration, as many countries experience civil war and secessionist pressures. Currently, there is no reference work that describes the impact upon the immigrants and the immigrant societies relevant to the world's cultures and provides an overview of important topics in the world's diasporas. The encyclopedia consists of two volumes covering three main sections: *Diaspora Overviews* covers over 20 ethnic groups that have experienced voluntary or forced immigration. These essays discuss the history behind the social, economic, and political reasons for leaving the original countries, and the cultures in the new places; *Topics* discusses the impact and assimilation that the immigrant cultures experience in their adopted cultures, including the arts they bring, the struggles they face, and some of the cities that are in the forefront of receiving immigrant cultures; *Diaspora Communities* include over 60 portraits of specific diaspora communities. Each portrait follows a standard outline to facilitate comparisons. The *Encyclopedia of Diasporas* can be used both to gain a general understanding of immigration and immigrants, and to find out about particular cultures, topics and communities. It will prove of great value to researchers and students, curriculum developers, teachers, and government officials. It brings together the disciplines of anthropology, social studies, political studies, international studies, and immigrant and immigration studies.
