Her Own Rules/Dangerous to Know

"A charming and magical story. The art is poetic and beautiful!" - Steward Lee, Director on Star Wars: The Clone Wars animated series. From their treehouse headquarters, come five teen titans and their wise teacher. Now they must save the "Zez," a mystical beast, from an encroaching civilization, the menacing General Moon, and his soldiers. Using all their varied powers, can the Treehouse Heroes protect their new friend and restore the balance of nature? Written by a Dark Horse comics editor and illustrated by a Star Wars: The Clone Wars animator, this fresh blend of adventure and lyrical art will excite young readers.

Sphere's Divide - Part 1 - Pilgrim of Element

What is management and how do the people who become managers take on a managerial identity? How does text inform the manager's identity? From cultural studies we understand that the relationship between text and reader is not passive but that each one works upon the other, and that text is active in forming the identity of the reader. This books is the first to analyse how many management textbooks construct their readers. It analyses management textbooks published since the 1950s and shows they

construct a world in which chaos is kept at bay only by strong management, and in which strong management is based upon the rationality of modernity. This book exposes and analyses such claims-to-truths, and theorizes their arguments using the work of Butler and Foucault, the sociology of scientific knowledge, critical legal studies, art history and queer theory. By revealing a postmodern turn in management textbooks, *The Social Construction of Management* is both a critical and empirical study that explores the constitution of managerial identities in the age of mass education in management. An exciting contribution to the growing body of knowledge within critical management studies, this book challenges the way we think about organizations and their management, and about management education as a whole. This is thought provoking reading for anyone studying management, or working in the managerial organization.

book is organized into three parts. Part I provides a general overview of lateralization development, while Part II compiles contributions that are more theoretical in nature. The last part summarizes the empirical research with neonates. This text specifically discusses the studies of early lateralized manual behaviors, character of human handedness, and factors that contribute toward variability in lateralization. The hemisphere differences in response to specific stimulus cues, phylogenetic perspective, and infant motor skills project are also elaborated. This text likewise covers the developmental view of hemispheric specialization and changes and constancies in development. This publication is useful to pediatricians, medical practitioners, and researchers concerned with early lateralized behavior.

Design of CNC Systems” covers the elements of control, the design of control systems, and modern open-architecture control systems. Topics covered include Numerical Control Kernel (NCK) design of CNC, Programmable Logic Control (PLC), and the Man-Machine Interface (MMI), as well as the major modules for the development of conversational programming methods. The concepts and primary elements of STEP-NC are also introduced. A collaboration of several authors with considerable experience in CNC development, education, and research, this highly focused textbook on the principles and development technologies of CNC controllers can also be used as a guide for those working on CNC development in industry.

Molecular Associations in Biology provides information pertinent to molecular biology. This book discusses several topics, including DNA replication, calculation of intermolecular energies, and thermodynamic parameters of polynucleotides. Organized into 35 chapters, this book starts with an overview of the specific association of the purine and pyrimidine bases in the nucleic acids, which provides the basis for storage, expression, and transmission of genetic information. This text then explores the secondary structures, interactions, and replication processes of nucleic acids. Other chapters consider the complex biological process of protein synthesis. This book discusses as well the methods of photodynamic action, which is significant in detecting energy transfer from dye to the biomolecule and identifying the free radicals produced. The final chapter deals with the macroscopic properties of molecular systems, which refer to such concepts as volume, mass, pressure, temperature, and pH. This book is a valuable resource for biophysicists, organic chemists, biochemists, and biologists.

The book addresses issues from circuit and system design to production design, and applies the ultra-low power circuits described to systems for digital hearing aids and capsule endoscope devices. Provides a valuable introduction to ultra-low power circuit design, aimed at practicing design engineers; Describes all key building blocks of ultra-low power circuits, from a systems perspective; Applies circuits and systems described to real product examples such as hearing aids and capsule endoscopes.

Li Ang's Visionary Challenges to Gender, Sex, and Politics

This groundbreaking volume explores Plutarch's unique survival in the argument that animals are rational and sentient, and that we, as humans, must take notice of their interests. Exploring Plutarch's three animal-related treatises, as well as passages from his ethical treatises, Stephen Newmyer examines arguments that, strikingly, foreshadow those found in the works of such prominent animal rights philosophers as Peter Singer and Tom Regan. Unique in viewing Plutarch's opinions not only in the context of ancient philosophical and ethical thought, but also in its place in the history of animal rights speculation, *Animals Rights and Reasons* points out how remarkably Plutarch differs from such anti-animal thinkers as the Stoics. Classicists, philosophers, animal-welfare students and interested readers will all

find this book an invaluable and informative addition to their reading.

Hiss of Death

The author successfully developed novel anti-HIV PD 404182 derivatives that exhibited submicromolar inhibitory activity against both HIV-1 and HIV-2. His thesis is in three parts. The first part expounds efficient methods for the synthesis of tricyclic heterocycles related to PD 404182 based on the sp²-carbon–heteroatom bond formations. Starting from arene or haloarene, C-O, C-N, or C-S bonds were formed by simply changing the reactants. These synthetic methods provide powerful approaches for the divergent preparation of pyrimido-benzoxazine, -quinazoline, or -benzothiazine derivatives. The second part explains SAR studies of PD 404182 for the development of anti-HIV agents. Through optimization studies of the central 1,3-thiazin-2-imine core, the benzene and cyclic amidine ring parts, 3-fold more potent inhibitors were obtained compared with the lead compound. The author also reveals by a time-of-drug-addition experiment that PD 404182 derivatives impaired HIV replication at the binding or fusion stage. The third part of the thesis elucidates the development of photoaffinity probes for the target identification of PD 404182. By the photolabeling experiment of HIV-1-infected H9 cells using these probes, the author detected proteins specifically bound to PD 404182. These new anti-HIV agents may be promising agents for anti-HIV therapy because their mechanisms of action differ from those of the

currently approved anti-HIV agents.

neurological disorders in the elderly. Comprehensive and practical, it includes the most recent diagnostic criteria and immediately accessible visual care paths including the latest pharmacologic and non-pharmacologic interventions. Covering a range of modalities, from the importance and impact of each disease to diagnostic criteria, genetics, laboratory and imaging findings, treatment and care paths, this book focuses on neurological conditions that occur commonly in older persons or which have a striking effect on their lives. The common types of dementias, Parkinson's disease and related disorders, rapidly progressive diseases, seizure disorders and multiple sclerosis are covered. Issues commonly affecting this population, such as neurobehavioral symptoms and caregiver issues, are discussed. *Neuro-Geriatrics: A Clinical Manual* is aimed at any physician who treats the elderly with neurological disorders: neurologists, geriatricians and geriatric psychiatrists, both specialists and general practitioners.

Animals, Rights and Reason in Plutarch and Modern Ethics

One of the great political strategists of his era, V. I. Lenin continues to attract historical interest, yet his complex personality eludes full understanding. This new edition of Moshe Lewin's classic political biography, including an afterword by the author, suggests new approaches for studying the Marxist visionary and founder of the Soviet state. *Lenin's Last Struggle* offers invaluable insights into the rise of the Bolshevik party and the Soviet Union, a saga

complicated by complex strategic battles among the leaders of Lenin's generation: leaders whose names are universally known, but whose personalities and motivations are even now not sufficiently understood. Moshe Lewin was a collective farm worker in the USSR and a soldier in the Soviet army. He later became director of studies at the Ecole Pratique des Hautes Etudes in Paris, a fellow of the Kennan Institute, a senior fellow of Columbia University's Russian Institute, and is now emeritus professor of history at The University of Pennsylvania.

Over the years, Jeremy Bernstein has been in contact with many of the world's most renowned physicists and other scientists, many of whom were involved in politics, literature, and language. In this diverse collection of essays, he reflects on their work, their personal relationships, their motives, and their contributions. Even for those people he writes about that he did not know personally, he provides important insights into their lives and work, and questions their character, their decisions, and the lives they led. In the first three essays, Professor Bernstein looks at economic theory and how some physicists who developed interesting economic models based on derivatives and hedge funds almost led the country into bankruptcy. In later essays, he discusses a suspect visit to Poland by the great Heisenberg during the Nazi era, a visit that there is almost nothing written about. Included also are

essays on ancient languages and a nuclear weapons program in South Africa that was supposedly dismantled. In one particularly humorous essay, he describes how an ill-conceived manned spaceship to be powered by an atomic bomb was being developed by some of the country's most powerful intellects. The project never got off the ground. Dipping into these pages is like rummaging around in the mind of a genius who has a potpourri of interests and an abundance of fascinating experiences. Bernstein has not only rubbed elbows with some of the finest minds in world, he has worked and played with them. He has sometimes mourned with them and laughed at them. His sharp wit and even sharper analysis make for a fascinating read.

Customer Service Intelligence uses a wide range of management and educational theories to provide different approaches that can be incorporated as part of the customer service trainer's toolkit. Concepts such as: • emotional intelligence • behaviour modification • role modelling • dimensions of procedure and conviviality • expectancy theory • socio-cultural concepts of (service) community • customer service as dynamic 'object' in activity theory • Zen mindfulness all form the basis of training design in different contexts. Some trainers are dealing with new employees in fast food environments, others are retraining engineers in customer service provision as part of a strategic marketing initiative. This book enables the trainer to review the context for training and select the most appropriate approach to take. The training design is thus carefully thought through for maximum impact on the audience. Professionalism in customer service training is essential for the growth of many industries. This complex and challenging task is assisted by these perspectives, recommendations and case studies.
