This—revised and enhanced—book examines the role of finance in supporting other functional areas while fostering an understanding of how financial decisions can create value. Corporate Finance covers areas related to estimating divisional cost of capital; executing a financing strategy; establishing debt and dividend policies consistent with the company's strategy and environment; choosing between dividends and stock repurchases; managing high growth and managing working capital. Its new topics include: - Corporate Financial Flexibility (Real options) - New Financial Instruments - Project Finance - Acquisitions and Control - Performance Measurement and Incentive Compensation The goal of this book is to provide a thorough understanding of how and why firms make their financial decisions the way they do and their impact on shareholder value. The central theme of the book is Value Based Management, which assumes that maximizing shareholder value is the governing objective of a firm. Each chapter of this new edition has detailed and real-life cases to help students easily understand and grasp concepts. The author has also provided the case-map of the Harvard Business School to make this book more user-friendly in classrooms. The inclusion of several new topics/cases, extensive pedagogical tools and a finance-for-non-finance approach make this book ideal for MBA/CA/CFA/ICWA students and executive education programs.

replacement decisions, capital rationing, capital budgeting under inflation uncertainty, capital budgeting in a multinational setting with attention to political risks, social project evaluation, and concepts of wealth measurement and distribution. The result is a wide ranging treatment for executive decision makers in finance, banking, investment, and general management, and for their colleagues with similar interests in the academic community. Riahi-Belkaoui begins by examining the principles underlying the time value of money. In Chapter Two he introduces capital budgeting and in Chapter Three moves to advanced capital budgeting. There he discusses such advanced topics as replacement decisions, capital rationing, and capital budgeting under uncertainty and inflation. In Chapter Four he takes up the same issues associated with capital budgeting but in a global context, and in Chapter Five, the determination of political risk and its use in capital budgeting internationally. Chapter Six compares the techniques of leasing versus purchasing and their reliance on capital budgeting techniques. In Chapter Seven he turns to the techniques of capital budgeting applied to social projects, and ends the book with an examination of the behavior and cognitive implications of wealth measurement and distribution. This is a useful survey and examination of the traditional and advanced techniques of capital budgeting and their applications in domestic and international contexts.

The business environment, particularly after the continuing oil crises of the seventies, can be characterized as evolving rapidly in complex and often unpredictable ways. Such things as high interest and inflation rates, fluctuating exchange rates, volatile commodity markets, and increasing political turmoil have led to a situation in which explicit consideration of environmental dynamics is becoming much more important for successful business planning than was true in the past.

Companies are finding that it is no longer possible to conduct "business as usual" under these changing circumstances. Rather, decision makers are having to be more cognizant of the many sources of uncertainty that could have serious impacts on the continued prosperity of the firm, as well as of actions that can be taken so that the company can thrive in spite of these greater uncertainties. Businesses have responded to these challenges by giving more thorough consideration to strategic issues. Whereas in the past the steady progression of markets and technology was taken for granted, the uncertainties associated with increased worldwide competition, as well as with other exogenous factors, have forced companies to think more about flexibility. This involves not only how best to exploit profitable current options, but also how to position themselves at present to be able to respond appropriately to threats and opportunities as they arise in the future. Unfortunately, in this redirection of outlook, the finance profession has not kept pace.

formal (nonnative) decision models and methods. To some extent, the validity of this statement can be measured by the impressive number of successes of disciplines as operations research and management science. However, as witnessed by the many discussions in the professional journals in these fields, many models and methods do not completely meet the requirements of decision making in practice. Of all possible origins of these clear shortcomings, we mainly focus on only one: the fact that most of these models and methods are unsuitable for decision situations in which multiple and possibly conflicting objectives play a role, because they are concentrated on the (optimal) fulfilment of only one objective. The need to account for multiple goals was observed relatively early. Hoffman [1955], while describing 'what seem to be the principal areas (in linear programming) where new ideas and new methods are needed' gives an example with conflicting goals. In this problem, the assignment of relative weights is a great problem for the planning staff and is 'probably not the province of the mathematician engaged in solving this problem'. These remarks were true precursors of later developments. Nevertheless, the need for methods dealing with multiple goals was not widely recognized until much later.

Britain, where stock markets can assess worth and channel capital with reasonable accuracy. Most economic theory dealing with business finance has been developed in precisely this latter environment. By bringing together economists from less developed countries with researchers from the United States and Western Europe, these essays break new ground by focusing on the unique problems of capital markets in the developing world. The problems of organizing securities markets and such capital market institutions as mutual funds are examined. The sources of financial capital and the interaction of state credit policies and the investment decisions and practices of the private sector are also analyzed. Together these essays provide developmental and business economists with provocative questions and will be of concern to all involved with economic growth in the less developed world.
