21st Century, commemorates the pioneering work of feminists, scholars and activists by reflecting on some of the major issues which have engaged them and influenced their scholarship and work since the early 1980s. It also addresses issues at the cutting edge of Gender and Development Studies, adopting a strong policy focus for treating current social and gender inequity. Finally, the volume looks to the future and speculates on the place of gender in the academy, as well as its outreach, and provides a unique opportunity to explore, with highly respected and renowned scholars, aspects of the present state of Gender Studies and prospects for the future of this dynamic area of scholarship.

Calendar of State Papers, Colonial Series

This study explores education and training systems of the Caribbean nations that are members both of The World Bank and the Caribbean Group for Cooperation in Economic Development (CGCED). The study does not attempt to provide a detailed blueprint for each country or set of institutions or present new research findings. Overall, the emphasis is to highlight the commonality of education sector issues across the region and to discuss successful ongoing initiatives, as well as outline promising new policy and investment options meriting further exploration to enhance access to and the quality and efficiency of education. The "Caribbean Education Action Plan" summarizes the options. It is hoped that the report will catalyze further debate among governments and

within the international development community on an appropriate human resources development strategy for the Caribbean for the 1990s and beyond. Three principal areas for further work include: (1) educational measurement and research to guide policy development; (2) the supply and distribution of educational materials; and (3) expansion of continuing education opportunities for all age groups. The report includes a foreword, an executive summary and recommendations, the proposed Caribbean education action plan, three annexes, a statistical appendix, a listing of 135 references and 47 other works consulted, and a map of the Caribbean region. (SG).

Selection for secondary education at 11-plus still arouses widespread controversy; and the psychological techniques which are employed, such as intelligence and attainments tests, are often criticised. Originally published in 1957, under the auspices of the British Psychological Society, a group of psychologists, experienced in this field, tried to present a balanced survey of the situation at the time. They show that the real problems of secondary schooling cannot be solved by simple administrative changes; they arise from historical causes, from the class structure of English society and the educational and vocational ambitions of parents. Psychology has studied the development and differentiation of children's abilities and interests with age, and thus throws light on the need for, and the consequences of, streaming children in different classes or schools, and the value of alternative systems such as the comprehensive school. Selection at 11-plus, it is admitted, does have harmful effects on teaching in the junior school and produces much emotional strain, though these effects are often exaggerated. It was, in

fact, accurate for some ninety per cent of children; yet the implications of its inevitable inaccuracy for some pupils cannot be ignored. The functions, and the value, of intelligence and attainments tests and the essay are examined, and full consideration given to the use of teachers' estimates of suitability and other techniques. The Report is addressed primarily to teachers, educational administrator, and psychologists – that is people with some background knowledge of the problems involved; but it should also be intelligible and helpful to the educated layman, since the more technical details are confined to Appendices.

High-stakes educational testing is a global phenomenon which is increasing in both scale and importance. Assessments are high-stakes when there are serious consequences for one or more stakeholders. Historically, tests have largely been used for selection or for providing a 'licence to practise', making them high-stakes for the test takers.

Bookmark File PDF Common Entrance Past Papers Barbados

Testing is now also used for the purposes of improving standards of teaching and learning and of holding schools accountable for their students' results. These tests then become high-stakes for teachers and schools, especially when they have to meet externally imposed targets. More recent has been the emergence of international comparative testing, which has become high-stakes for governments and policy makers as their education systems are judged in relation to the performances of other countries. In this book we draw on research which examines each of these uses of high-stakes testing. The articles evaluate the impact of such assessments and explore the issues of value and fairness which they raise. To underline the international appeal of high-stakes testing the studies are drawn from Australia, Africa, the Caribbean, Europe, former Soviet republics and North America. Collectively they illustrate the power of high-stakes assessment in shaping, for better or for worse, policy making and schooling. This book was originally published as a special issue of *Assessment in Education: Principles, Policy & Practice*.
