Mass media has become an integral part of the human experience. News travels around the world in a split second affecting people in other countries in untold ways. Although being on top of the news may be good, at least for news junkies, mass media also transmits values or the lack thereof, condenses complex events and thoughts to simplified sound bites and often ignores the essence of an event or story. The selective bibliography gathers the books and magazine literature over the previous ten years while providing access through author, title and subject indexes.

Encyclopedia of Information Ethics and Security

The passage of the Telecommunications Act of 1996 inaugurated a new and highly volatile era in telecommunications. The first major overhaul of U.S. communications law since 1934--when no one had a television set, a cordless phone, or a computer--the Act was spurred into being by broad shifts in technology use. Equally important, this book shows, the new law reflects important changes in our notions of the purpose of communications regulation and how it should be deployed. Focusing on the evolution of the concept of the public interest, Aufderheide examines how and why the legislation was developed, provides a thematic analysis of the Act itself, and charts its intended and unintended effects

in business and policy. An abridged version of the Act is included, as are the Supreme Court decision that struck down one of its clauses, the Communications Decency Act, and a variety of pertinent speeches and policy arguments. Readers are also guided to a range of organizations and websites that offer legal updates and policy information. Can the government stick us with privacy we don't want? It can, it does, and according to Anita L. Allen, it may need to do more of it. Privacy is a foundational good, Allen argues, a necessary tool in the liberty-lover's kit for a successful life. A nation committed to personal freedom must be prepared to mandate privacy protections for its people, whether they eagerly embrace them or not. This unique book draws attention to privacies of seclusion, concealment, confidentiality and data-protection undervalued by their intended beneficiaries and targets--and outlines the best reasons for imposing them. Allen looks at laws designed to keep website operators from collecting personal information, laws that force strippers to wear thongs, and the myriad employee and professional confidentiality rules--including insider trading laws--that require strict silence about matters whose disclosure could earn us small fortunes. She shows that such laws recognize the extraordinary importance of dignity, trust and reputation, helping to preserve social, economic and political options throughout a lifetime.

In the course of its in-depth analysis the discussion focuses on such factors as the following: EU telecommunications policy as revealed in liberalization and harmonization legislative measures; the EU electronic communications framework; case law covering issues of refusal to supply and the essential facilities doctrine; application of Article 82 EC to bottlenecks; specific types of an undertakings unilateral behaviour that may often occupy NRAs and competition authorities in the context of their ex post competition law investigations under Article 82 EC; strategic alliances and mergers in the move toward multimedia; access to premium content and the emergence of new media; the scope of content regulation in the online environment; and broadband (regulation of local loop unbundling and bitstream access). European Communications Law and Technological Convergence

This book presents a thorough critical examination of the European regulatory reaction to technological convergence, tracing the explicit and implicit mechanisms through which emerging concerns are incorporated into regulation and competition law, and then goes on to identify the patterns that underlie these responses so as to establish the extent to which the issues at stake, and the implications of intervention, are fully understood and considered by authorities. Focusing on 'conflict points' - areas of tension inevitably arising among overlapping regimes - the analysis covers such elements as the following: the provision of 'multiple-play' services; the advent of 'convergent devices'; the interchangeability of transmission networks; subscription-based ('pay television') services; the diversification of television services (such as on-demand and niche-theme channels); the relative scarcity of (premium) content; the 'migration' of television content with cultural and social relevance to pay television; and the emergence of 'bottleneck' segments in the communications value chain. Endorsing the adjustment of existing rules to meet pluralist objectives, the author outlines a single, coherent regulatory approach. He shows how a careful analysis of the implications of technological convergence helps to solve conflicts between regimes. Specifically, the analysis addresses the level - national or EU - at which particular regulatory responses should emerge, the objectives guiding action, and the tools through which these objectives may be pursued. These conclusions command the attention of policymakers, regulators, and lawyers active in the ongoing development of communications law.

Ethics in Public Relations

Over the last decade, the European Union has undertaken major market-opening reforms in the area of network industries. The liberalization process has now been completed in the air transport and electronic communications sectors and has achieved considerable progress in other network industries, such as postal services, energy (electricity and gas), and rail transport. Creating competition in network industries is not an easy matter, however. Because they benefit from certain advantages such as a large initial market share and control of essential facilities, incumbents typically retain substantial market power in a number of relevant markets and may even use their position to prevent others from engineering such markets. Controlling market power is thus one of a number of key concerns in network industries. It can be achieved in two main ways; either through the adoption and implementation of sector-specific rules or through the application of competition rules. There are advantages and disadvantages to both options, but it is a combination of the two that generally prevents incumbents from abusing their market power in liberalized markets. Competition law and sector-specific regulation provide for the application of remedies on incumbents or other operators holding significant market power. Such remedies are either structural or a behavioural. In some occasions they will apply ex ante, while in others ex post. This book comprises a collection of outstanding essays dealing with the complex legal and economic issues raised by remedies in network industries. While some of

these essays analyse remedies from a generic point of view, others focus on specific remedies applied specifically in particular sectors. The sectors covered in this volume include electronic communications, postal services, energy (electricity and gas), and air transport. The final paper also presents a discussion of the United States approach to remedies in network industries. The essays comprised in this book have been written by leading academics (lawyers and economists), as well as private practitioners.

Invaluable guidance on the most important legal issues facing nonprofits today Internet communication is the lifeblood of countless nonprofit organizations, yet there exists no specific law to provide for its regulation. Without solid legal guidance, nonprofits risk not only missing out on the unlimited opportunities that the Internet has to offer, but also jeopardizing their tax-exempt status. The Nonprofits' Guide to Internet Communications Law analyzes and explains the laws applicable to Internet communications by nonprofit organizations. Nonprofit law expert Bruce Hopkins writes that with Congress and government agencies

reluctant to create new law, it will ultimately be up to the courts to determine the future of Internet law affecting nonprofit organizations. Extrapolating from the underlying principles of existing law, Hopkins addresses the legal ramifications of Internet business activities, charitable-giving administration, fundraising programs, lobbying, political campaign activities, and more. The Nonprofits' Guide to Internet Communications Law proves an unparalleled resource for this emerging field.

ICT Law and Internationalisation:A Survey of Government Views

Approaching the theme from an antitrust perspective and focusing on telecommunications and television broadcasting, this volume examines how traditional European competition law doctrines and principles can be applied to this converging sector. The application of antitrust rules to the communications sector is often one of the most controversial areas of law and policy. The shift towards a more competition law oriented form of regulation is one of the main principles inspiring the recent reform of European sectorial regulation enshrined in the 2002 Electronic Communication Package. The Package was adopted in 2002 and is in the process of being implemented throughout the Union. This monograph provides a detailed description of the new regulatory package and highlights the interplay between regulatory provisions and EC competition law. It then follows the pattern of a typical antitrust analysis containing chapters on the definition of relevant market in the sector and various forms of abuses of market power. The book also critically examines the Commission's practice and policy in the field of merger control and considers its relationship with wider regulatory policies. Finally it analyses the sector from the perspective of the 'European' public interest and the changed nature of communications as a public service.

EU Competition Law and Regulation in the Converging Telecommunications, Media and IT Sectors

Using numerous practical examples, this book examines the evolution of EC telecommunications law following the achievement of liberalisation, the main policy goal of the 1990s. After reviewing the development of regulation in the run-up to liberalisation, the author identifies the methods used to direct the liberalisation process and tests their validity in the post-liberalisation context. A critical analysis is made of the claim that competition law will offer sufficient means to regulate the sector in the future. Particular emphasis is given to the way in which EC Competition Law changed in the 1990s using the essential facilities doctrine, an expansive non-discrimination principle and the policing of cross-

subsidisation to tackle what were then thought of as regulatory matters. Also examined within the work is the procedural and institutional interplay between competition law and telecommunications regulation. In conclusion, Larouche explores the limits of competition law and puts forward a long-term case for sector-specific regulation, with a precise mandate to ensure that the telecommunications sector as a whole fulfils its role as a foundation for economic and social activity.

Liberal Democracy and the New Media is about the relationship between the media and the liberal democratic state, which is changing rapidly under the pressures of a global communications revolution. The book uses European and international law and policy to examine how that once intimate relationship is being transformed. The Media and the State explores key contemporary media issues, including the protection of cultural diversity, the promotion of pluralism and other democratic media policies, the safeguard of state information, the protection of reputation and

privacy, and the control of harmful and offensive content. It captures the extraordinary impact of the liberal media model on European and international law as well as exploring its profound weaknesses.

Communications Law

Legal problems abound in the information society. Electronic commerce, copyright, privacy, illegal and harmful content, taxes, wiretapping governments face an enormous challenge to meet the advent of the Internet and ICT with a flexible, up-to-date, and adequate legal framework. Yet one aspect makes this challenge even more daunting: internationalisation. Law is still to a great extent based on nation states, but the information society is above all a borderless and global society. Territoriality and national sovereignty clash with the need for a global approach to address ICT-law issues. Should states leave everything to the global market, or should they intervene to protect vital national interests? How can one enforce national rules in a world where acts take place somewhere' in Cyberspace? This book presents the positions on these issues of the governments of the Netherlands, Germany, France, the UK, and the US, as well as of international organisations. How do they think about co-regulation, law enforcement, harmonisation, international cooperation, and alternative dispute resolution? How do they deal with applicable law and online contracts, privacy, international liability of Internet providers, and electronic signatures? What are the implications of the

European Electronic Commerce Directive and the draft Crime in Cyberspace convention? Any legal framework that is to fit the global information society must take into account internationalisation. This volume shows to what extent governments are meeting this challenge.
