## **Postgraduate Vascular Surgery**

With so many excellent books about cardiac prevention already available, why is heart disease still the number-one killer of men and women? Despite dozens of proven diet and exercise programs available, why are most people overweight? Why aren't we doing a better job preventing heart disease? We know what to do, but why aren't we following through? What are we doing wrong? In *Prevention: The Most Important Treatment of Heart Disease*, cardiologist Dr. Gregg Yamada provides answers to these questions and shares a novel perspective, using diet and exercise, that may help you reduce your risk of heart disease. Describing prevention as a treatment is not a play on words. The most important treatment of any medical condition is to keep it from occurring in the first place. In order to do a better job at preventing heart disease, both patients and doctors must completely change their approach to heart disease. Prevention (lowering blood pressure, cholesterol, and blood sugar; losing weight through diet and exercise) must be viewed as an actual treatment of heart disease, no different from medications, a heart bypass, or an angioplasty. In other words, controlling your blood pressure and lowering your cholesterol (prevention) is just as important as having an angioplasty (treatment). Losing weight and controlling your diabetes (prevention) is equally as important as bypass surgery (treatment). Prevention is the most important treatment of heart disease

### **Scher and Daniel's Nails**

The Null Seeking Trial (NST) is a research technique which was developed in response to the dilemmas facing surgeons designing, setting up and running trials and also for patients when considering participation in randomised trials. NST could be applied to a wide variety of research questions in different disciplines. It differs from conventional randomised trial methodology both in design and in purpose. The purpose of a conventional trial is to observe a difference between treatment groups and then to infer that this difference is caused by the treatment; so called 'causal inference'. The purpose of a Null Seeking Trial is to find the circumstances where two treatments have the same effect. With conventional trials, a result is not available until the trial is completed unlike NSTs where individual patients' results are available as soon as they are recorded. When a patient participates, they can consult the results already available to help them decide which treatment to have. They only opt for randomisation if for patients like them there is little difference between the results of the two treatments. This scheme creates a negative feedback loop that determines in which patients the two treatments are equivalent.

### MCQs and EMQs in Surgery: A Bailey & Love Companion Guide

In The Weight Loss Surgery Coping Companion, Dr. Tanie Kabala assists weight loss surgery patients- many of whom have a long history of using overeating as a coping mechanism- in identifying healthy, new strategies for coping with challenging feelings and emotional eating. With insight and sensitivity, Dr. Kabala leads readers through exercises that help them develop strategies for coping with anxiety, depression, anger, loneliness, identity confusion, and the compulsion to overeat- feelings common to the post-surgery period. Recognizing that emotional eating often leads to re-gain after surgery, Dr. Kabala provides two detailed, mindfulness-based strategies for overcoming emotional eating, The Nourish Technique and the COPE Technique. Packed with quotes from actual patients, this book allows readers to recognize that their challenges are shared by many members of the weight loss surgery community. Readers walk away with a personalized coping guide that can be used not only during the post-surgery period, but also for a lifetime. "As a surgeon specializing in weight loss, I have found that much of my patients' success is attributed to what happens outside the operating room. The importance of lifestyle changes, behavior modification, and mindful eating cannot be understated. Dr. Kabala's book is a recipe for success. We give a copy to all of our patients, and have seen a measurable benefit in those patients who use it- not only in their total weight loss, but in their satisfaction with and longevity of their weight loss." -Marc A. Neff, MD, FACS, Bariatric

Surgeon "I have seen my weight loss patients have extreme success after reading Dr. Kabala's book, and have found that patients who read it are more apt to comply with necessary changes to make their health journey a safe, successful one. I recommend Dr. Kabala's book to all my patients and will continue to do so!" -Cheri Leahy, RD, RDN, Registered Dietitian "As a psychologist, I unfortunately see individuals who have endured the challenge of weight loss surgery only to gain the weight back, often because they have not addressed the issues and feelings that caused them to overeat and gain weight in the first place. The Weight Loss Surgery Coping Companion is the only book of its kind that helps weight loss surgery patients avoid this pit-fall. With insight and compassion, Dr. Kabala helps readers identify, explore, and then effectively cope with challenging emotions, thereby helping to ensure long-term weight loss success. The book includes thought-provoking questions and writing exercises that I find very helpful to my patients, as well as a wealth of healthy, non-food related, targeted coping strategies. Thanks to Dr. Kabala for writing a thoughtful, sensitive, and practical book that is an excellent tool not only for weight loss surgery patients, but also for support group leaders and psychologists. I use it with my patients and highly recommend it." -Jill P. Weber, Ph.D., Licensed Psychologist
