Aero Digest

This is the first in a new series of highly illustrated books for the model maker. Basic Aviation Modelling is an excellent introduction to the art of making model aeroplanes from kits. High definition pictures take the reader through all the stages of making a variety of kits. The emphasis throughout is to make the tasks understandable in a step-by-step format. Working with readily available kits from Tamiya, Verlinden and Revell, the less experienced modeller is shown the do's and don'ts of modelling techniques with particular emphasis on the common difficulties that the inexperienced modeller might face. This series will build into a library of practical information for the modeller.

Books on Selected Technical Subjects in the IAS Library (up to 1950)

Grumman Tbm Avenger Pilot's Flight Manual

Pilot's Handbook of Aeronautical Knowledge

Air Scout Manual

An updated edition of the essential FAA resource for both beginner and expert pilots.

Grumman F8F-2 Bearcat Fighter Aircraft Pilot's Flight Manual

Two leading experts introduce beginners to basic aerodynamic principles and the building techniques of master modelers. Their richly illustrated manual provides valuable information on every phase of assembling and flying model aircraft--from the correct methods of kit-building and paint and tissue covering to the secrets of selecting the best engine and radio-control rig for each plane.

Educational Bulletin

Part of the necessary literature for the Air Scout program, this book covers meteorology, air plane design, history, and others areas which the scout will need to learn about.

Aviation Unit and Intermediate Maintenance Manual

Written by renowned modelling expert and TV visual effects designer Mat Irvine, the Model Builders' Manual provides a practical guide for both novice and experienced model builders, showing how to obtain professional results, with a focus on plastic model kits. In addition to the practicalities of building models, this introduction to modelling covers the history of how the modern kit industry developed, how a model kit is designed, the range of tools and paints available to build models, the origins and variety of the various scales, collecting models and model clubs. Practical coverage includes details of basic building techniques, painting and spraying, decals and dioramas, plus techniques associated with predominantly plastic-based hobby kits such as white metal, photo-etch and resin components.

Basic Aviation Modelling

Illinois Schools Journal

A Flight Information Manual for the Cessna 172, for use when learning to fly on the C172 or during type rating training, and a great reference manual for pilots who fly the aircraft. Compiled from engineering manuals, manufacturers handbooks, and the author's extensive flight experience. Provides straight forward, useful explanations of the aircraft, systems and flight operations including performance planning, with photographs, diagrams and schematics.

Integrated Handwork for Elementary Schools

The Grumman F8F Bearcat was designed to defeat the nimble Japanese fighter aircraft that appeared at the end of WWII. The conflict ended before the Bearcat could be placed into service, and although it eventually saw combat with the French in the Indo-China war, it never flew in harm's way in the U.S. Navy. One of the best piston-powered fighters ever built, the F8F could achieve a cruising speed of over 420 mph. In 1946 a Bearcat set a time-to-climb record of 10,000 feet in 94 seconds, a feat not matched until the advent of high-performance jet fighters nearly a decade later. Originally printed by

Grumman and the U.S. Navy, this Flight Operating Handbook taught pilots everything they needed to know before entering the cockpit. Classified 'Restricted', the manual was declassified and is here reprinted in book form. This affordable facsimile has been slightly reformatted. Care has been taken however to preserve the integrity of the text.
