Safety and Ethics in Healthcare: A Guide to Getting it Right

The authors of this edited volume focus on the emergence of populist discourses, coming from movements or parties from Romance-speaking countries in Europe and in Latin America. The primary audience of this volume are researchers working in the fields of political discourse analysis, or anybody with interest in language in politics.

Paris 1961

The theory of abstract groups comes into play in an astounding number of seemingly unconnected areas like crystallography and quantum mechanics, geometry and topology, analysis and algebra, physics, chemistry and even biology. Readers need only know high school mathematics, much of which is reviewed here, to grasp this important subject. Hundreds of problems with detailed solutions illustrate the text, making important points easy to understand and remember.

Liquid Pipeline Hydraulics

This book is concerned with the steady state hydraulics of natural gas and other compressible fluids being transported through pipelines. Our main approach is to determine the flow rate possible and compressor station horsepower required within the limitations of pipe strength, based on the pipe materials and grade. It addresses the scenarios where one or more compressors may be required depending on the gas flow rate and if discharge cooling is needed to limit the gas temperatures. The book is the result of over 38 years of the authors' experience on pipelines in North and South America while working for major energy companies such as ARCO, El Paso Energy, etc.

'The image I have is a kid on a country lane on a Saturday afternoon herding his family cattle, meaning no harm to anybody and putting one step wrong. It's one thing to die in combat, it's one thing to die defending land, but it's another thing to die tending cattle on a Saturday afternoon and we want a world where that doesn't happen' - Michael Ignatieff

During the twentieth century a landmine plague raged across the globe. It began on the battlefields of two world wars, it gathered momentum in Korea and Vietnam and then spread like wildfire throughout the developing world. The Devil's Gardens is the definitive story of the landmine. It is the story of the development and proliferation of a weapon of terror. It is also the story of suffering and devastation, and a worldwide crusade to put an end to the curse of landmines forever. The issues surrounding landmines and their continued use are controversial. Drawing on a wide range of distinguished interviewees and the authors' first-hand experiences in severely mine-affected countries, The Devil's Gardens look at all sides of the landmine story.

Making Sense of the Central African Republic

This series of Designers Guides to the Eurocodes provides comprehensive guidance in the form of design aids, indications for the most convenient design procedures and worked examples. The books also include background information to aid the designer in understanding the reasoning behind and the objectives of

the codes. All of the individual guides work in conjunction with the Designers Guide to EN1990: Basis of Structural Design.

This is the companion photo history to SOG: The Secret Wars of American's Commandos in Vietnam. In 1972 the U.S. military took steps to ensure that such a book could never be printed by destroying all the known photos that existed of the top-secret Studies and Observations Group. But unknown to those in charge, SOG veterans brought back with them hundreds of photographs of SOG in action and kept them secret for more than three decades. More than 700 irreplaceable photos bring to life the stories of SOG legends Larry Thorne, Bob Howard, Dick Meadows, George Sisler, "Q" and others, and documents what really happened deep inside enemy territory: Operation Tailwind, the Son Tay raid, SOG's defense of Khe Sanh, Hatchet Force operations, Bright Light rescues, HALO insertions, string extractions, SOG's darkest programs and much more.

Political Discourses at the Extremes

The Strip Method Design Handbook is a thorough guide to the use of the strip method, developed by Arne Hillerborg, for design of reinforced concrete slabs. The strip method of design is relevant to many types of slabs including rectangular slabs with all sides supported and regular flat slabs with cantilevering parts. The author discusses unevenly distributed loads, concentrated loads and the influence of openings as well as joist floors and prestressed slabs. This book provides a practical guide for the designer demonstrating how to use the strip method in a wide range of design situations specific to a slab type. The method is illustrated throughout with numerical examples and the analysis is rationalised with approximations and formulas for the calculation of design moments.

Principles of Copyright Law - Cases and Materials

This book is dedicated to improving healthcare through reducing delays experienced by patients. With an interdisciplinary approach, this new edition, divided into five sections, begins by examining healthcare as an integrated system. Chapter 1 provides a hierarchical model of healthcare, rising from departments, to centers, regions and the "macro system." A new chapter demonstrates how to use simulation to assess the interaction of system components to achieve performance goals, and Chapter 3 provides hands-on methods for developing process models to identify and remove bottlenecks, and for developing facility plans. Section 2 addresses crowding and the consequences of delay. Two new chapters (4 and 5) focus on delays in emergency departments, and Chapter 6 then examines medical outcomes that result from waits for surgeries. Section 3 concentrates on management of demand. Chapter 7 presents breakthrough strategies that use real-time monitoring systems for continuous improvement. Chapter 8 looks at the patient appointment system, particularly through the approach of advanced access. Chapter 9 concentrates on managing waiting lists for surgeries, and Chapter 10 examines triage outside of emergency departments, with a focus on allied health programs Section 4 offers analytical tools and models to support

analysis of patient flows. Chapter 11 offers techniques for scheduling staff to match patterns in patient demand. Chapter 12 surveys the literature on simulation modeling, which is widely used for both healthcare design and process improvement. Chapter 13 is new and demonstrates the use of process mapping to represent a complex regional trauma system. Chapter 14 provides methods for forecasting demand for healthcare on a region-wide basis. Chapter 15 presents queueing theory as a method for modeling waits in healthcare, and Chapter 16 focuses on rapid delivery of medication in the event of a catastrophic event. Section 5 focuses on achieving change. Chapter 17 provides a diagnostic for assessing the state of a hospital and using the state assessment to select improvement strategies. Chapter 18 demonstrates the importance of optimizing care as patients transition from one care setting to the next. Chapter 19 is new and shows how to implement programs that improve patient satisfaction while also improving flow. Chapter 20 illustrates how to evaluate the overall portfolio of patient diagnostic groups to guide system changes, and Chapter 21 provides project management tools to guide the execution of patient flow projects.

The Roll in England and France in the Late Middle Ages

This publication aims to provide a valuable and practical tool for those countries where court decisions in the copyright domain are scarce or non-existent - either because copyright law is a fairly new phenomenon or because legislation has not been extensively applied. To that effect, this publication examines a carefully selected number of court decisions illustrating general principles of copyright law, drawn from common law, civil law and the legislative systems of Arab countries. As the basic principles illustrated here are to a large extent commonly shared, many of the cases presented have a wider relevance, going beyond the confines of the legal system of which they form a part. L'objet du présent recueil est d'offrir un outil précieux et commode aux pays dont la jurisprudence en matière de droit d'auteur est restreinte ou inexistante, soit parce que le droit d'auteur est une réalité relativement nouvelle pour eux, soit parce que la législation en vigueur dans ce domaine n'a pas été largement appliquée. À cette fin, le présent ouvrage expose un certain nombre de décisions de justice, soigneusement sélectionnées, qui illustrent les principes généraux du droit d'auteur et qui émanent de la common law, du droit civil et des systèmes législatifs des pays arabes. Compte tenu de la valeur quasi universelle de ces principes fondamentaux, la pertinence des cas présentés va bien souvent au-delà des limites du système juridique dont ils relèvent.

Through revised text, new photos, specialised illustrations, updated charts and additional information sidebars, The Ultimate Sniper once again thoroughly details the three great skill areas of sniping; marksmanship, fieldcraft and tactics.

Country Reports on Human Rights Practices for 2007, Report

This book covers liquid pipeline hydraulics as it applies to transportation of liquids through pipelines in a single phase steady state environment. It will serve as a

practical handbook for engineers, technicians and others involved in design and operation of pipelines transporting liquids. Currently, existing books on the subject are mathematically rigorous, theoretical and lack practical applications. Using this book, engineers can better understand and apply the principles of hydraulics to their daily work in the pipeline industry without resorting to complicated formulas and theorems. Numerous examples from the author's real life experience are included to illustrate application of pipeline hydraulics.

The Ultimate Sniper

In the Middle Ages, rolls were ubiquitous as a writing support. While scholars have long examined the texts and images on rolls, they have rarely taken the manuscripts themselves into account. This volume readdresses this imbalance by focusing on the materiality and various usages of rolls in late medieval England and France. Researchers from England, France, Germany and Singapore demonstrate in 11 contributions how this approach can increase our understanding of the rolls and their contents, as well as the contexts in which they were produced and used.

Schaum's Outline of Group Theory

The Country Reports on Human Rights Practices are submitted annually by the U.S. Department of State to the U.S. Congress. The reports cover internationally recognized individual, civil, political, and worker rights, as set forth in the Universal Declaration of Human Rights.

The 7 Principles of Conflict Resolution

This excellent text highlights all aspects of the analysis and design of elements related to spatial structures, which have been carefully selected from existing structures. Analysing the design of elements of any full scale structure that contains facilities that have already been constructed makes good economic sense and avoids duplication in respect of research and development, the decision-making process and accurate design criteria for new constructed facilities.

SOG

English Government in the Thirteenth Century

The linguistic integration of migrants affects every aspect of settling in a new country (employment, health, etc.). The aim of this collection of texts is to propose a number of specific measures member states can take to help adult migrants become acquainted with the language of the host country. The main focus is on organising language courses that meet migrants' real communication needs. It is not enough for authorities simply to consider the technical aspects of such courses,

they should also design and conduct them in accordance with the fundamental values of the Council of Europe. A number of issues concerning the linguistic integration of adult migrants are presented here, beginning with the notion of linguistic integration itself. Family reunion, the nature of citizenship and the function of language tests, among others, are dealt with from the point of view of language and language use. Readers are invited to reflect on the type of language competences that need to be acquired as well as an appropriate use of the Common European Framework of Reference for Languages. The collection also sets out approaches and instruments designed to assist in implementing effective policies.

The World Investment Report series provides the latest data and analysis foreign direct investment (FDI) and other activities of transnational corporations, as well as the policies to regulate them at the national and international levels. It aims to analyse the cross-border activities of translational corporations and related policy measures with a view to helping policymakers formulate appropriate policy responses. The special theme of the 2016 Report examines the ownership of multinational enterprises and the control of affiliates, analyzing related key and emerging policy issues. These include entry conditions for foreign investors and treatment of established investment, as well as investment promotion and facilitation. Bringing together an innovative analysis of complex multinational ownership structures and relevant policy practices, the focus of the report is on the effectiveness of existing policies for distinguishing between "domestic" and "foreign" companies in a globalized economy. The report provides policymakers a new framework for handling ownership issues in 21st century investment policymaking.

Polymeric Dispersions: Principles and Applications

For decades knowledge of the 1961 massacre of Algerian demonstrators by the Paris police was suppressed. This study investigates the roots of this violence within the colonial system and how the event was covered up until it resurfaced after the 1980s to become one of the most controversial issues in contemporary French politics.

African Management

Lying at the centre of a tumultuous region, the Central African Republic and its turbulent history have often been overlooked. Democracy, in any kind of a meaningful sense, has eluded the country. Since the mid-1990s, army mutinies and serial rebellion in CAR have resulted in two major successful coups. Over the course of these upheavals, the country has become a laboratory for peacebuilding initiatives, hosting a two-decade-long succession of UN and regional peacekeeping, peacebuilding and special political missions. Drawing together the foremost experts on the Central African Republic, this much-needed volume provides the first in-depth analysis of the country's recent history of rebellion, instability, and international and regional intervention.

A Study of Splashes

Le glaucome est une maladie dégénérative du nerf optique qui entraîne une perte progressive de la vision commençant tout d'abord en périphérie et progressant graduellement vers le centre. Cette maladie est souvent associée à une pression intra-oculaire (PIO) élevée qui comprime et endommage les fibres du nerf optique et de la rétine. Dans d'autres cas, malgré une PIO normale, une circulation sanguine inadéquate entraîne la mort (nécrose) des cellules du nerf optique et de la rétine. La perte de vision associée au glaucome est permanente et irréversible. Sans traitement, cette maladie peut mener jusqu'à la cécité. Le glaucome est une maladie fréquente puisqu'il atteint 2 % de la population totale en France. Ce sujet de santé publique fera l'objet du rapport annuel de la SFO en 2014. Le rapport abordera: - les bases fondamentales et cliniques; - la prise en charge thérapeutique; - les aspects socio-économiques et juridiques; - le dépistage et les incidences en terme de santé publique.

Le pouvoir discrétionnaire du Procureur de la Cour pénale internationale

Nonlinear parameter optimization in least squares was studied from a point of view of differential geometry. Properties of curvilinear coordinates, scale factors and curvature were investigated. Parameters of the condition function were expressed as functions of algorithm parameters to generalize the formulas. The analysis of the convergence process cumulated in the development of procedures that accelerate convergence. Scale factors were used as weights to the differential correction vector to improve the direction of search. A method to correct for curvature, called back projection method, was developed. Use was made of the tangent plane on which the path of search on the fitting surface was projected. Deviations from the original direction were corrected by optimizing the angle of deviation and the step factor. The correspondence between rate of convergence and curvature of the path of search was illustrated with an example. A small geodesic curvature at the starting point indicates fast convergence. Curvature properties of the parametric curves appeared to be of more influence than those of the fitting surface. To avoid heavy oscillation of intermediate parameter values a method was developed that required the intermediate points to be the foot of a perpendicular from the terminal point of intermediate observation vectors thus producing paths of controlled approach. Since condition functions may have a complicated structure in that they can be implicit functions, sequential functions or can consist of mathematical models involving alternative functions, it was treated how first derivatives can be calculated and programmed systematically for these

functions. Methods introduced were made operational by means of a FORTRAN program. A description of the use of the subprograms and instructions to modify the main program to suit the various algorithms and procedures developed are given in the Appendices.
