Introduction to Electronic Analogue Computers, Second Revised Edition is based on the ideas and experience of a group of workers at the Royal Aircraft Establishment, Farnborough, Hants. This edition is almost entirely the work of Mr. K. C. Garner, of the College of Aeronautics, Cranfield. As various advances have been made in the technology involving electronic analogue computers, this book presents discussions on the said progress, including some acquaintance with the capabilities of electronic circuits and equipment. This text also provides a mathematical background including simple differential equations. It then further tackles topics on analog computers, including its types and functions. This book will be invaluable to students specializing in any computer related studies, as well as others interested in electronic analog computers.

It's up to the Changers to rescue their friend Mack from the enemy—but in order to do that, they must first break an ancient curse—in the seventh action-packed novel of The Hidden World of Changers series! Fiona, Mack, Gabriella, and Darren are Changers, a magical line of shapeshifters that can transform into mythological creatures, from werewolves and selkies to lightning birds and spirit foxes. Mack has abandoned his friends to join their enemy, the Shadow Fox. Gabriella wants to find Mack as soon as possible, but it's too dangerous. The Changers need magical protection before they confront the Shadow Fox again. Luckily, the First Four have found a protection spell that will guard Darren against the Shadow Fox's dark powers. There's only one problem: The spell won't work. Darren's ancestors were cursed long ago during an ancient war, and the only way to enact the protection spell is to break the curse. To do that, Darren will have to find a descendent of the one who cursed his ancestor. Will Darren be able to find someone to break the curse...or will he and his family suffer the Spider's Curse for all time?

Project 2010

First published in 1895, this book recounts the author's 1893 expedition to the Tafilet oasis in Morocco, one of the largest oases in the world. Previously largely inaccessible (before the invention of the motor car it was at least 10 days' journey south of Fez across the Atlas mountains and the Sahara), Harris took advantage of the Sultan of Morocco Mulai el Hassen's decision to pay a visit to the oasis during the autumn of that year. Throughout the book the author describes in great detail the places he visited and the people he met along the way. There are detailed descriptions of Marrakesh and the villages of the Atlas Mountains, as well as ruminations on the differences between the Arabs and the Berber tribes, and the situation of the Jews. Crossing the desert, Harris reached the Sultan's camp at the edge of the oasis, and there follows a detailed description of the activities of the Sultan and his retinue, their dealings with the troublesome tribes of the area, and accounts of the history, geography and people of Tafilet. The book concludes with the author's return journey to the north, and an account of the events following the Sultan's own return from the oasis and his subsequent death. Painting as it does a vivid picture of the state of Morocco at the very end of the 19th century, Walter B. Harris's Tafilet is sure to be of great interest to all those fascinated by the history of this unique and diverse North African country.

Practising fundamental patient care skills and techniques is essential to the development of trainees' wider competencies in all medical specialties. After the success of simulation learning techniques used in other industries, such as aviation, this approach has been adopted into medical education. This book assists novice and experienced teachers in each of these fields to develop a teaching framework that incorporates simulation. The Manual of Simulation in Healthcare, Second Edition is fully revised and updated. New material includes a greater emphasis on patient safety, interprofessional education, and a more descriptive illustration of simulation in the areas of education, acute care medicine, and aviation. Divided into three sections, it ranges from the logistics of establishing a simulation and skills centre and the inherent problems with funding, equipment, staffing, and course development to the considerations for healthcare-centred simulation within medical education and the steps required to develop courses that comply with 'best practice' in medical education. Providing an in-depth understanding of how medical educators can best incorporate simulation teaching methodologies into their curricula, this book is an invaluable resource to teachers across all medical specialties.
