This New American Red Cross CPR/AED for the Professional Rescuer Participant's Manual and course reflect changes based on the 2005 Consensus on Science for CPR and Emergency Cardiovascular Care (ECC) and the Guidelines 2005 for First Aid. Changes to this program and manual include simplifications to many of the

CPR skill sequences, which helps improve retention. There have also been changes to help improve the quality of CPR. The integration of CPR skills into the operation of AEDs had changed to help improve survival from sudden cardiac arrest. Professional rescuers are now trained to use AEDs on adults and children. Information has been updated and added to this program to help professional rescuers administer epinephrine, aspirin and fixed-flow-rate oxygen. The skills learned in this course include adult, child and infant rescue breathing, conscious and unconscious choking, CPR, two-rescuer CPR and adult and child AED. Additional training can be added to this course including bloodborne pathogens training and emergency oxygen administration. While the skills and knowledge that professional rescuers use are increasing, this training will help you meet your most important responsibility as a professional rescuer- the responsibility to save lives.

KEY FEATURES This textbook will contain all material from PHTLS, 7e that is relevant for those first on scene at a traumatic event. Provides CEUs for First Responders, EMTs, paramedics, nurses, & physicians; proceeds from the course go to the NAEMT and are used to support the profession; it improves the quality of care (research is available); can be incorporated into initial training or as a stand-alone continuing education course; promotes critical thinking as the foundation for providing quality care. PHTLS Trauma First Response is a continuing education program authored and administered by the PHTLS division of the National Association of EMTs (NAEMT). One book covers ALL aspects of prehospital trauma including first-responder-level training on the fundamental knowledge of how to identify mechanisms of injury, recognize life-threatening injuries, assess and manage trauma patients, perform appropriate first-responder-level interventions, and more. Skills are presented in a heavily illustrated, step-by-step format that is easy to learn and understand. Each chapter begins with one or more scenarios with scenario solutions that allow for real-world application of the chapter's content. Evidence-based information ensures that students have the most up-to-date content available. More information on kinematics than any similar book on the market. A consistent approach makes the book easy to follow. Chapter Objectives and closing Summaries present must-know information for each chapter for quick reference and learning reinforcement. A comprehensive Environmental and

Wilderness chapter offers detailed information on these key topics. Burns chapter provides an in-depth view of burn trauma patients. Heavily illustrated to aid students in understanding key concepts and techniques. Disaster Management chapter includes techniques and protocols for the evolving specialty of disaster management. Chapters are consistent with the American College of Surgeons' Advanced Trauma Life Support (ATLS) 8th edition and course. ATLS is the parent course for PHTLS. Heavily referenced to reflect recent medical literature and consensus documents/ position papers, showing that PHTLS Trauma First Response is evidence-based and accurate.

Emergency Medical Responder

SCUBA is a fun, relaxing, educational, interesting, and -- if approached properly -- safe activity, it is nonetheless a sport that has risks. SCUBA diving is in fact an extreme sport that can injure or even kill very quickly, and in some very nasty ways. What we are doing is entering an alien environment that is normally hostile to human life. We cannot breathe in water without some kind of mechanical assistance. These are facts and the details should be covered in every Open Water (OW) class. All too often in today's society, however, people do not want to take the time to properly prepare and get the education to safely take on new tasks. Some agencies appear to have responded to this by developing training programs that turn out high numbers of certified divers in shorter time frames, necessitating the reduction of time spent on what I consider to be some necessary basic skills. While this has resulted in great numbers of new divers entering the water, it has not resulted in many of those divers staying in the water. New divers are often given just enough training to enable them to dive in the most benign conditions under close supervision. Even then, there are still those who find out their initial training was just not adequate. It is at this point that they either make the decision

to get more training or they leave the sport. The latter happens all too often. The former, when it does happen, does not always occur for the right reasons. Students should return to training to expand their diving and learn new skills; they should not have to return for new training just to be able to enjoy the sport safely. To require students to come back for basic information is something I find very troubling, and in some cases, has actually cost divers their lives. A lack of rescue instruction has resulted in a number of diver deaths when buddies did not know how to drop weights, support a diver at the surface, or even stay in contact with their buddy. This is another area frequently talked about, but all too often not actually put into practice. The concept of always diving with a buddy and just what that means in the "real world" is often given too little attention. Unfortunately, it is impossible to foresee every conceivable situation that can arise, but there are many basic issues that can be covered. The following chapters will hopefully address much of what is being overlooked or delayed in many programs as they exist today. It is my hope that this information also finds its way into the hands of those who have not yet begun the training process. I have included a chapter on how to select an instructor based on the quality of instruction and the content of the course. In some cases, these classes may cost more than the less comprehensive courses also available, but usually they do not. In fact, when you consider the additional skills and education gained from a more comprehensive course, you will find that you have received much more value for each dollar spent. In addition, you gain priceless benefits in the form of greater confidence,

enjoyment, skills, and -- most importantly -- safety. Enjoy and dive safe

Although schools of law, medicine, and business are now highly respected, schools of education and the professionals they produce continue to be held in low regard. In *Ed School*, Geraldine Jonçich Clifford and James W. Guthrie attribute this phenomenon to issues of academic politics and gender bias as they trace the origins and development of the school of education in the United States. Drawing on case studies of leading schools of education, the authors offer a bold, controversial agenda for reform: ed schools must reorient themselves toward teachers and away from the quest for prestige in academe; they must also adhere to national professional standards, abandon the undergraduate education major, and reject the Ph.D. in education in favor of the Ed.D.

The New Statesman and Nation

Building on his first book, "SCUBA: A Practical Guide for the New Diver", James

Lapenta addresses what is most often the next step in diver training. Advanced Level or Advanced Open Water training is often taken by divers to gain additional skills and knowledge. It is also taken to allow them to gain access to more challenging dives and dive sites. These also pose a greater degree of risk to the individual. Unfortunately some advanced classes are no more than a "taste" or "tour" of advanced level dives. The divers do not get the new knowledge and skills required to safely embark on these dives. In order to safely pursue these dives James has outlined the steps to take to reduce the risk of injury and worse. From describing the dives to offering advice on the content one should expect, as well as selecting an instructor, he offers new and not so new divers guidance. Additional sections on equipment options, air supply management, dive planning, and dive selection for maximum learning potential are looked at. Also included is a section on a subject often overlooked in recreational SCUBA diving - the after-effects of a diving accident and rescue/recovery on the rescuer and witnesses to the event. Post Traumatic Stress in Recreational Dive Rescues is a real possibility and one that must be looked at when executing dives with greater risk. Safety in training and after training is the heart of this work and the driving force behind its publication. James has experienced the best in training and that which left something to be desired. He gives examples of both throughout the work. If you do not have his first book, it is highly recommended that you also acquire it as a companion to this one. While they do contain some sections of the same information, there are sections in the first book that are not included in this that

are highly beneficial.

Emergency Responder: Advanced First Aid for Non-EMS Personnel is not just another first-aid book. Designed for working professionals, this flexible program blends textbook with online modules and instructor-led hands-on training events. Drawing from their years of experience training and developing emergency response teams, the authors cover the most important skills needed in order to effectively respond to life-threatening events. Carefully designed skill sheets included in the text assist readers in developing the competency necessary to perform each skill with accuracy and confidence. Establishing a foundation in the basic concepts of emergency medical care, the text presents in a logical, easy-to-follow format many of the most common illnesses and injuries responders are likely to encounter. The authors provide realistic depth and breadth of information in a way that will make you successful caring for people who have fallen victim to sudden illness or injury.
