The major objective of process safety management (PSM) of highly hazardous chemicals is to prevent unwanted releases of hazardous chemicals especially into locations that could expose employees and others to serious hazards. An effective process safety management program requires a systematic approach to evaluating the whole chemical process. Using this approach, the process design, process technology, process changes, operational and maintenance activities and procedures, nonroutine activities and procedures, emergency preparedness plans and procedures, training programs, and other elements that affect the process are all considered in the evaluation.

Shakespeare's "A Midsummer Night's Dream"

Seminar paper from the year 2009 in the subject English Language and Literature Studies - Literature, grade: 2,0, University of Heidelberg (Anglistisches Seminar), course: Literature and Film: Shakespeare, language: English, abstract: This term

paper treats the simplicity of the workmen in A Midsummer Night's Dream and the significance of the embedded play-within-a-play. The first part discusses the simplicity of the workmen and their characteristics that make them who they are. First, an analysis of the main artisan figure, Nick Bottom, will be given. This analysis is classified in his characteristic traits, formed by his behavior and his being, and his language. Those two categories will show the simplicity of his figure and his role in the play. His companions, the other workmen, are then grouped and treated in general before detailed characteristics about each individual artisan are itemized. The second part of this term paper handles the importance of the play-within-a-play. A general overview and definition about this literary device will be given in order to discuss the importance of the specific story in the play. The reference of the Pyramus and Thisbe story as the play-within-a-play in A Midsummer Night's Dream will complete this term paper on its topic.
