Emergency Medical Services Dispatcher

Our culture is obsessed with design. Sometimes

designers can fuse utility and fantasy to make the mundane appear fresh—a cosmetic repackaging of the same old thing. Because of this, medicine—grounded in the unforgiving realities of the scientific method and peer review, and of flesh, blood, and pain—can sometimes confuse “design” with mere “prettifying.” Design solves real problems, however. This collection of papers underwrites the importance of design for the MMVR community, within three different environments: in vivo, in vitro and in silico. in vivo: we design machines to explore our living bodies. Imaging devices, robots, and sensors move constantly inward, operating within smaller dimensions: system, organ, cell, DNA. in vitro: Using test tubes and Petri dishes, we isolate in vivo to better manipulate and measure biological conditions and reactions. in silico: We step out of the controlled in vitro environment and into a virtual reality. The silica mini-worlds of test tubes and Petri dishes are translated into mini-worlds contained within silicon chips. The future of medicine remains within all three environments: in vivo, in vitro, and in silico. Design is what makes these pieces fit together—the biological, the informational, the physical/material—into something new and more useful.

Coping with the Stress of First Responder Life
“Mindfulness for Warriors is a work of major

importance that offers practical approaches to self-care and serenity for our first responders” —Louise Harmon, author of Happiness from A to Z #1 New Release in Military Families A traumatic way of life. First responders have the incredibly difficult job of running toward danger while the rest of us run away. No training prepares them for what they see and endure. Kim Colegrove understands what it’s like to watch someone go through that. After 30 years in law enforcement, her husband took his own life. This agonizing experience opened Kim’s eyes to the desperate need for an effective form of stress-relief and support for first responders. The power of meditation. Taking care of our mental health is a priority. For first responders, like cops and EMTs facing trauma, ensuring that their heads are in a healthy place is crucial. Kim is here to propose meditation as a resource for first responders. A source of hope. In 2017, Kim founded The PauseFirst Project, Mindfulness for First Responders. Kim offers the PauseFirst block of training to organizations across the country; teaching techniques that help reduce stress, regulate emotion, and improve overall health and well-being. Her work to bring awareness is a tribute to both her husband and the countless other first responders struggling with the realities of their jobs. In Mindfulness for Warriors find: Evidence-based practices to help first responders and families deal with stress Interviews with first responders who share stories of overcoming, surviving, and thriving Colegrove’s own raw and intimate story of her husband’s troubles and how she continues each day fighting in his memory If you’ve looked for encouragement from books like Bulletproof Spirit,

Bullets in the Washing Machine, or I Love a Cop (Third Edition); you will find a further source of healing in Mindfulness for Warriors.

A first-of-its-kind resource, the "Active Learning Manual: EMT-B" is an accumulation of active learning exercises that extends beyond the classroom, encouraging students to develop a deeper understanding of both the knowledge and skills necessary to become an excellent EMT-Basic. No matter which primary textbook is used, students will benefit immensely from adding the "ALM" to their study program. "Active Learning" is an approach whereby students take an active part in the learning process. This system reaches beyond taking notes, asking questions, and participating in skills practice sessions, where the instructor is placed at the center of the learning. Active learning involves reading, writing, discussing, and solving problems. Simply stated, active learning means getting students involved both in doing things and in "thinking" about the things they are doing. We have assembled a variety of activities that move the student to the center of the learning process. In addition, we have striven to create activities that address as many learning styles as possible. Chapter features include: Chapter Summary: An expanded summary that can be used as a study tool. Med Minute: Contained in clinical chapters, these provide a general overview of commonly prescribed medications students will likely encounter. Pathophysiology Pearls: Also contained in clinical chapters, these are designed to provide information relating to specific medical conditions

and/or disease processes. Pearls from the Podium: In non-clinical chapters, these are simple but valuable insights shared by the authors, including study tips, patient care, and career tips. Review Questions: As with so many other things in life, benefits result from increased practice; in this case, the benefits include improved scores on state and national exams.

Question types include short answer, multiple choice, and scenario. Case Studies: Two case studies in each chapter allow students to apply critical thinking skills and knowledge. A series of questions follows each case study. Active Exploration: Two in each chapter, here's where the fun begins. Many of these involve getting out of the classroom and actively exploring information and concepts. Retro Review: A minimum of three multiple-choice questions from previous chapters keep the cobwebs from forming on information presented earlier in the course. Thinking and Linking: To put the "puzzle" together, this table is a quick reference guide for relating current chapter information to other chapters.
