The Evolution of Claire

A new book to help the dying, their loved ones and their health care workers better understand the dying process and to come to terms with death itself. *The Art of Dying* is a contemporary version of the medieval *Ars Moriendi*--a manual on how to achieve a good death. Peter Fenwick is an eminent neuropsychiatrist, academic and expert on disorders of the brain. His most compelling and provocative research has been into the end of life phenomena, including near-death experiences and deathbed visions of the dying person, as well as the experiences of hospice and palliative care workers and relatives of dying people. Dr. Fenwick believes that consciousness may be independent of the brain and so able to survive the death of the brain, a theory which has divided the scientific community. The "problem with death" is deeply rooted in our culture and the social organization of death rituals. Fenwick believes that with serious engagement and through further investigation of these phenomena, he can help change attitudes so that we in the West can face up to death, and embrace it as a significant and sacred part of life. We have become used to believing that we have to shield each other from the idea of death. Fear of death means we view it as something to be fought every step of the way. Aimed at a broad popular readership, *The Art of Dying* looks at how other cultures have dealt with death and the dying process (The Tibetan "death system", Swedenborg, etc.) and compares this with phenomena reported through recent scientific research. It describes too the experiences of health care workers who are involved with end of life issues who feel that they need a better understanding of the dying process, and more training in how to help their patients die well by overcoming the common barriers to a good death, such as unfinished business and unresolved emotions of guilt or hate. From descriptions of the phenomena encountered by the dying and those around them, to mapping out ways in which we can die a "good death", this book is an excellent basis for helping people come to terms with death.

Product Safety & Liability Reporter

As a leading Confederate general, Braxton Bragg (1817-1876) earned a reputation for incompetence, for wantonly shooting his own soldiers, and for losing battles. This public image established him not only as a scapegoat for the South's military failures but also as the chief whipping boy of the Confederacy. The strongly negative opinions of Bragg's contemporaries have continued to color assessments of the general's military career and character by generations of historians. Rather than take these assessments at face value, Earl J. Hess's biography offers a much more balanced account of Bragg, the man and the officer. While Hess analyzes Bragg's many campaigns and battles, he also emphasizes how his contemporaries viewed his successes and failures and how these reactions affected Bragg both personally and professionally. The testimony and opinions of other members of the Confederate army--including Bragg's superiors, his fellow generals, and his subordinates--reveal how the general became a symbol for the larger military failures that undid the Confederacy. By connecting the general's personal life to his military career, Hess positions Bragg as a figure saddled with unwarranted infamy and humanizes him as a flawed yet misunderstood figure in Civil War history.

Buckle up as Douglas Keister takes you for a decidedly retro ride in the world of diminutive travel trailers in Teardrops and Tiny Trailers. The demand for vintage trailers--the smaller the better--has risen dramatically in recent years, with the most in-demand trailers being "teardrops," first manufactured in the 1930s and containing just indoor sleeping space and an outdoor exterior kitchen. Also profiled in the book are "canned ham" trailers, whose shape resembles the profile of a can of ham; small-size examples of America's most beloved vintage trailer, the Airstream; miniscule gypsy caravans in Europe; and fiberglass trailers made in Canada. Two hundred color photographs showcase these trailers' sleek exteriors, retro-styled interiors, and, in many cases, the restored classic cars that tow them. Teardrops and Tiny Trailers includes a resource section chock-full of places to locate vintage trailers, clubs to join, and rallies to attend. Photographer/writer Douglas Keister has authored thirty-six critically acclaimed books. His books on classic recreational vehicles include Ready to Roll, Silver Palaces, and Mobile Mansions. In addition, he has authored twenty-five books on architecture, including Inside the Bungalow, Storybook Style, Red Tile Style, Classic Cottages, and Cottages. Keister also writes and illustrates magazine articles and contributes photographs and essays to dozens of magazines, newspapers, books, calendars, posters, and greeting cards worldwide. The Wheel and I

In nine eventful years - 1957 to 1965 - the six-cylinder-engined Austin Healey evolved into a formidable and increasingly specialised rally car. By any standards,

it was the first of the "homologation specials" - a type made progressively stronger, faster, more versatile, and more suitable for the world's toughest International rallies. Though the motorsport foundations had been laid by the Healey Motor Co. Ltd, the work needed to turn these cars into rock-solid 210bhp projectiles was almost all completed by the world-famous "works" BMC Competitions Department at Abingdon. It was because of their vast experience that the "Big Healeys" as they were always affectionately known - became fast and tough, nimble yet durable, so that they were capable of winning major events wherever traction could be assured. Not only did the "works" Austin Healeys win some of the world's most famous events - including Liege-Sofia-Liege, Spa-Sofia-Liege and the French and Austrian Alpine rallies, but they were also supremely fast on events like the Tulip, and came so close, so often, to winning their home event, the British RAC Rally, which traditionally ended the season. Not only did these cars turn their drivers - Pat Moss, Donald Morley, Rauno Aaltonen, Timo Makinen and Paddy Hopkirk among them - into heroes, but individual cars seemed to take on a character and reputation of their own. This book lists each and every success, each and every notable car, and traces exactly how the machinery developed, and improved, from one season to the next. Over time, the "works" cars not only adopted aluminium cylinder heads and body panels, much-modified chassis, transmission and exhaust systems, but they also became supremely strong and could withstand a true battering on the world's toughest events. This book relates how the cars were improved by the engineers, how the drivers came to love their heavy and sometimes self-willed steeds, and how the management team got the most out of everything - machinery, personnel, drivers, and regulations. . Heavily illustrated and packed with technical detail this book will make a welcome addition to any motorsport fans library.

The exploration of space could have been decades ahead of where we are now. During a two-decade period, from the 1950s to the 1970s, a nuclear rocket propulsion system was developed capable of performing robotic and human exploration of our solar system. The US government's Rover programme developed the system and succeeded in demonstrating the propulsion capabilities required for deep space exploration missions. The programme was terminated for political reasons in the mid-1970s. You have to wonder if the nuclear rocket had been used and further developed during the 30 years since then, where could we be today? This comprehensive history details both the technical accomplishments of the nuclear rocket system and the political wrangling that strangled it. Together, NASA and the Atomic Energy Commission carried out the Rover program, and together they had their budgets slashed and were micro-managed by pork-barrel-motivated politicians. And after accomplishing success against the odds, they were shut down. Instead of NERVA, the state-of-the-art nuclear system developed by the Rover program, Congress was sold on the Space Shuttle, outdated before it was launched. Instead of the solar system, we got low-Earth orbit. James A Dewar has produced a well-researched and well-organised account of what was accomplished, who made the decisions, and why it all was for naught. If NASA and the AEC had been allowed to do the job they had originally been given, today we could have been exploring out To the End of the Solar System.
