Over the recent years, biochemistry has become responsible for explaining living processes such that many scientists in the life sciences from agronomy to medicine are engaged in biochemical research. This book contains an overview focusing on the research area of proteins, enzymes, cellular mechanisms and chemical compounds used in relevant approaches. The book deals with basic issues and some of the recent developments in biochemistry. Particular emphasis is devoted to both theoretical and experimental aspect of modern biochemistry. The primary target audience for the book includes students, researchers, biologists, chemists, chemical engineers and professionals who are interested in biochemistry, molecular biology and associated areas. The book is written by international scientists with expertise in protein biochemistry, enzymology, molecular biology and genetics many of which are active in biochemical and biomedical research. We hope that the book will enhance the knowledge of scientists in the complexities of some biochemical approaches; it will stimulate both professionals and students to dedicate part of their future research in understanding relevant mechanisms and applications of biochemistry.

Ninfa/Ballou/Benore is a solid biochemistry lab

manual, dedicated to developing research skills in students, allowing them to learn techniques and develop the organizational approaches necessary to conduct laboratory research. Ninfa/Ballou/Benore focuses on basic biochemistry laboratory techniques with a few molecular biology exercises, a reflection of most courses which concentrate on traditional biochemistry experiments and techniques. The manual also includes an introduction to ethics in the laboratory, uncommon in similar manuals. Most importantly, perhaps, is the authors' three-pronged approach to encouraging students to think like a research scientist: first, the authors introduce the scientific method and the hypothesis as a framework for developing conclusive experiments; second, the manual's experiments are designed to become increasingly complex in order to teach more advanced techniques and analysis; finally, gradually, the students are required to devise their own protocols. In this way, students and instructors are able to break away from a "cookbook" approach and to think and investigate for themselves. Suitable for lower-level and upper-level courses; Ninfa spans these courses and can also be used for some first-year graduate work.

La segunda edición de Fundamentos de Bioquímica continúa con la peculiar solidez, claridad y rigor químico que caracterizaron a la primera edición, a la vez que actualiza sus contenidos para reflejar los descubrimientos más deslumbrantes de la bioquímica moderna. Los prestigiosos autores Donald y Judith Voet, junto con Charlotte Pratt produjeron una vez más una obra de investigación organizada en forma cuidadosa, escrita con claridad, que incluye múltiples ilustraciones sobre las estructuras de las moléculas biológicas, la actividad metabólica de las células y los principios de la biología molecular. En el libro se describen las técnicas de análisis más relevantes y, cuando corresponde, las correlaciones entre los conocimientos bioquímicos, la salud y las enfermedades humanas. El objetivo de los autores ha sido tanto facilitar a los estudiantes una comprensión profunda de la bioquímica como alimentar su capacidad de sorprenderse ante la química de la vida.
