Journal for Research in Mathematics Education

This book discusses examples of discrete mathematics in school curricula, including in the areas of graph theory, recursion and discrete dynamical systems, combinatorics, logic, game theory, and the mathematics of fairness. In addition, it describes current discrete mathematics curriculum initiatives in several countries, and presents ongoing research, especially in the areas of combinatorial reasoning and the affective dimension of learning discrete mathematics. Discrete mathematics is the math of our time.' So declared the immediate past president of the National Council of Teachers of Mathematics, John Dossey, in 1991. Nearly 30 years later that statement is still true, although the news has not yet fully reached school mathematics curricula. Nevertheless, much valuable work has been done, and continues to be done. This volume reports on some of that work. It provides a glimpse of the state of the art in learning and teaching discrete mathematics around the world, and it makes the case once again that discrete mathematics is indeed mathematics for our time, even more so today in our digital age, and it should be included in the core curricula of all countries for all students.

The Children's Friend

From the Introduction: The purpose of this case study is to estimate an earnings determination model for Canadian chartered accountants, engineers and scientists, and on the basis of this model to estimate the returns to investment in some fields of higher education in Canada. These estimates will then be compared and contrasted with the results from other studies and some implications for Canadian education policy will be drawn. In pursuing this general purpose, the following specific issues will be considered: (1) the structure of earnings in the public and private sectors, and the differential effect of formal education on earnings in the two sectors; (2) the impact of work function on earnings and the relationship between formal education and work function; (3) the effect on earnings of ability as measured by high school marks, and the interaction of ability and formal education; and (4) the sensitivity of the estimates of earnings to the form of the earnings model.
