Published at the beginning of the twenty-first century, Sustainable Landscape Construction took a new approach to what was then a nearly new subject: how to construct outdoor environments based on principles of sustainability. This enormously influential book helped to spur a movement that has taken root around the U.S. and throughout the world. The second edition has been thoroughly updated to include the most important developments in this landscape revolution, along with the latest scientific research in the field. It has been expanded to provide even more ideas for designing, building, and maintaining environmentally sensitive landscapes. It is essential reading for everyone with an interest in “green” landscape design. Like its predecessor, the new edition of Sustainable Landscape Construction is organized around principles that reflect the authors’ desire to put environmental ethics into practice. Each chapter focuses on one over-arching idea. These principles of sustainability are clearly articulated and are developed through specific examples. More than 100 projects from around the globe are described and illustrated. A new chapter details ways in which landscape architectural practice must respond to the

Confessions of an Eco-Warrior

The concept to utilize an ion-conducting polymer membrane as a solid polymer electrolyte offers several advantages regarding the design and operation of an electrochemical cell, as outlined in Volume 215, Chapter 1 (L. Gubler, G.G. Scherer). Essentially, the solvent and/or transport medium, e.g., H_2O , for the mobile ionic species, e.g., H^+ for a cation exchange membrane, is taken up by and confined into the nano-dimensional morphology of the ion-containing domains of the polymer. As a consequence, a phase separation into a hydrophilic ion-containing solvent phase and a hydrophobic polymer backbone phase establishes. Because of the narrow solid electrolyte gap in these cells, low ohmic losses reducing the overall cell voltage can be achieved, even at high current densities. This concept was applied to fuel cell technology at a very early stage; however, performance and reliability of the cells were low due to the dissatisfying membrane properties at that time. The development of perfluoro sulfonate and carboxylate-type membranes, in particular for the chlor-alkali process, directly fostered the further development of proton-conducting membranes and, as a consequence, also the progress in this type of fuel cell technology (polymer electrolyte fuel

"The Cruel Country is a memoir centered around the author's journey to Puerto Rico after her mother had been diagnosed with late stage lung cancer. The story takes us through Cofer's journey as she sits by the her mother's hospital bed during the last moments of her life, through the grieving process and Catholic funereal rites that follow her mother's death and her return to her life in the U.S. Cofer's writerly talents richly inform this narrative meditation on her family's life in Puerto Rico and the States, her frantic research on cancer, considerations of Catholicism, family, and culture , and much more. The book at the same time is very much a study of cultural differences and the balance that the author must find as a Puerto-Rican American, not wholly part of her mother's culture. We see this come to a head as she communicates with doctors, participates in funeral arrangements and sacraments, and recollects her Anglo husband John's father's death. This very personal story about the author's life will resonate with Cofer's legions of fans including students and those interested in memoir, ethnic and cultural crossings, spirituality, loss, grief, and reconciliation"--

Make and test projects are used as introductory design experiences in almost every engineering educational institution world wide. However, the educational benefits and costs associated with these projects have been seldom examined. Make and Test Projects in Engineering Design provides a serious examination of the design of make and test projects and their associated educational values. A taxonomy is provided for the design of make and test projects as well as a catalogue of technical information about unconventional engineering materials and energy sources. Case studies are included based on the author's experience of supervising make and test projects for over twenty-five years. The book is aimed at the engineering educator and all those planning and conducting make and test projects. Up until now, this topic has been dealt with informally. Make and Test Projects in Engineering Design is the first book that formalises this important aspect of early learning in engineering design. It will be an invaluable teaching tool and resource for educators in engineering design.

The pristine lands and waterways are being strip mined, dammed up, and paved over by greedy

government hacks and their corrupt corporate coconspirators. And the manic, beer-guzzling, rabidly antisocial ex-Green Beret isn't just getting mad. Hayduke plans to get even. Together with a radical feminist from the Bronx; a wealthy, billboard-torching libertarian MD; and a disgraced Mormon polygamist, Hayduke's ready to stick it to the Man in the most creative ways imaginable. By the time they're done, there won't be a bridge left standing, a dam unblown, or a bulldozer unmolested from Arizona to Utah. Edward Abbey's most popular novel, *The Monkey Wrench Gang* is an outrageous romp with ultra-serious undertones that is as relevant today as it was in the early days of the environmental movement. The author who Larry McMurtry (*Lonesome Dove*) once dubbed "The Thoreau of the American West" has written a true comedic classic with brains, heart, and soul that more than justifies the call from the Los Angeles Times Book Review that we should all "praise the earth for Edward Abbey!"
