This volume sets the stage for understanding the evolution and importance of nursing science in the field by providing a brief historical overview of the tobacco epidemic and emerging science, describing changing trends in tobacco use, reviewing health risks of smoking and benefits of quitting, reviewing concepts in nicotine addiction and evidence-based recommendations for tobacco dependence treatment. Also highlighted are nursing science efforts and leadership in addressing two barriers to mounting programs of nursing research in tobacco

control: the lack of nursing education and training in tobacco control and the limited research funding and mentorship. Finally, the contributors to this volume address the issue of smoking in the profession as it influences nurses' health, interventions with patients, and, potentially, scholarship efforts.

"The change is in how we think about medical decision-making. Whereas modern medicine's core idea was that medical decisions should be based on the cold, hard facts of science-the province of the doctor-the "new medicine" reflects the notion that all medical decisions must impose value judgments. Since physicians can claim no expertise on making those value judgments, the pendulum has swung greatly toward the patient in evaluating alternatives and making decisions about their treatment." "Veatch uses a range of fascinating contemporary and historical examples to reveal how values underlie almost all medical procedures, and illustrate his case that this change is inevitable and a positive trend for patients."--BOOK JACKET.

Since the FDA approved Viagra in March 1998, the «little blue pill» has been prescribed to over twenty million men. The *Viagra Ad Venture: Masculinity, Media, and the Performance of Sexual Health* chronicles the story of Viagra as reported in our nation's news outlets and promoted by Pfizer Pharmaceutical's marketing materials. In this critical discourse analysis, author Jay Baglia uses feminist and performance theory to uncover the meaning of Viagra and its relationship to performances of masculinity. At stake are the ways in which we construct normalcy, particularly as it relates to health, sexuality, gender, and the body. This book fits well in a variety of classes including gender studies, media studies, research methods, feminist theory, human sexuality, and health communication.
