## **American Book Publishing Record**

The official publication of the Air & Surface Transport Nurses Association, this comprehensive and timely text is the standard reference for flight nurses and other health professionals involved in medical transportation. Each clinical chapter covers epidemiology, anatomy and physiology and/or pathophysiology, and specific conditions.

Human error is implicated in nearly all aviation accidents, yet most investigation and prevention programs are not designed around any theoretical framework of human error. Appropriate for all levels of expertise, the book provides the knowledge and tools required to conduct a human error analysis of accidents,

regardless of operational setting (i.e. military, commercial, or general aviation). The book contains a complete description of the Human Factors Analysis and Classification System (HFACS), which incorporates James Reason's model of latent and active failures as a foundation. Widely disseminated among military and civilian organizations, HFACS encompasses all aspects of human error, including the conditions of operators and elements of supervisory and organizational failure. It attracts a very broad readership. Specifically, the book serves as the main textbook for a course in aviation accident investigation taught by one of the authors at the University of Illinois. This book will also be used in courses designed for military safety officers and flight surgeons in the U.S. Navy, Army and the Canadian Defense Force, who currently utilize the HFACS system during aviation accident investigations. Additionally, the book has been incorporated into the popular workshop on accident analysis and prevention provided by the authors at several professional conferences world-wide. The book is also targeted for students attending Embry-Riddle Aeronautical University which has satellite campuses throughout the world and offers a course in human factors accident investigation for many of its majors. In addition, the book will be incorporated into courses offered by Transportation Safety International and the Southern California Safety Institute. Finally, this book serves as an excellent reference guide for many safety professionals and investigators already in the field.

## **The AOPA Pilot**

## **Speednews**

## **A Human Error Approach to Aviation Accident Analysis**

Provides information on the world's aerospace industries, including: combat aircraft; military and commercial airliners and freighters; tankers; electronic warfare and special reconnaissance/surveillance types; and a new space flight section, detailing commercial and manned spacecraft.

Aerospace Marketing Management is a marketing manual devoted to: -the aeronautics sector: parts suppliers, aircraft manufacturers, and airlines, -the space sector: suppliers, integrators, and service providers. It presents the essentials of

marketing from basic concepts such as segmentation, positioning and the marketing plan, to the product policy, pricing, distribution and communication. This book also includes specific chapters on project marketing, brand policy, gaining loyalty through maintenance and training, compensation, and alliance strategies. The different chapters show the new changes due to Internet: -e-procurement for the purchase strategy, -interactive communication with websites, -e-ticketing for the airlines to reach final consumers.

Flight Discipline is the complete tool kit for any aviator, whether military, commercial, or recreational, to develop the crack discipline needed to be a safe

and effective aviator. Major Tony Kern analyses the causes of poor flight discipline, gives chilling case studies of the consequences, and lays out a plan for individual improvement. Key words are italicized and review questions included for each chapter. An unequalled guide to this mainspring of good piloting.

The Smell of Kerosene tells the dramatic story of a NASA research pilot who logged over 11,000 flight hours in more than 125 types of aircraft. Donald Mallick gives the reader fascinating firsthand descriptions of his early naval flight training, carrier operations, and his research flying career with NASA and its predecessor agency, the National Advisory Committee for Aeronautics (NACA).

### **Air and Surface Patient Transport**

Discusses flying from various viewpoints, including the job opportunities, the great financial rewards, and the risks, while at the same time conveying the raw excitement of flying with a collection of classic aviation photographs

Adverse aircraft-pilot coupling (APC) events include a broad set of undesirable and sometimes hazardous phenomena that originate in anomalous interactions between pilots and aircraft. As civil and military aircraft technologies advance, interactions between pilots and aircraft are becoming more complex. Recent accidents and other incidents have been attributed to adverse APC in military aircraft. In addition, APC has been implicated in some civilian incidents. This book evaluates the current state of knowledge about adverse APC and processes that may be used to eliminate it from military and commercial aircraft. It was written for technical, government, and administrative decisionmakers and their technical and administrative support staffs; key technical managers in the aircraft manufacturing and operational industries; stability and control engineers; aircraft flight control system designers; research specialists in flight control, flying qualities, human factors; and technically knowledgeable lay readers.
