Anyone working to improve the childbearing experience and help women avoid unnecessary intervention has encountered numerous obstetric myths or old doctors' tales. And while the evidence in the medical literature may be solidly, often unequivocally, against whatever the doctor said, without access to that evidence, the pregnant woman is quite reasonably going to follow her doctor. This book is an attempt to make the medical literature on a variety of key obstetric issues accessible to people who lack the time, expertise, access, or proximity to a medical library to research concerns on their own. This compact, accurate, yet understandable reference is designed for people without medical training and organized for easy access. After an introductory chapter giving basic information about the different types of medical studies, how to evaluate them, and some basic statistical concepts, Goer provides chapters on cesarean issues, pregnancy and labor management, and a review of alternative approaches. Each chapter begins with a stated myth, followed by an examination of the reality. Goer then analyzes the mainstream belief, pointing out its fallacies. Then comes a list of significant points gleaned from the studies and keyed to her abstracts. Next is the outline by which the abstracts are grouped. Finally come the numbered abstracts of relevant articles published, in most cases, after 1980. The book concludes with a glossary of medical terms and an index. This compact, accurate, and understandable reference tool is designed for people without medical training as well as care givers.

Civilization in the West

In Korea in the early 1800s, news from the countryside reached the king by means of signal fires. On one mountaintop after another, a fire was lit when all was well. If the king did not see a fire, that meant trouble, and he would send out his army. Linda Sue Park's first picture book for Clarion is about Sang-hee, son of the village firekeeper. When his father is unable to light the fire one night, young Sang-hee must take his place. Sang-hee knows how important it is for the fire to be lit-but he wishes that he could see soldiers . . . just once. Mountains, firelight and shadow, and Sunhee's struggle with a hard choice are rendered in radiant paintings, which tell their own story of a turning point in a child's life.

High Voltage Circuit Breakers

It's the end of the 21st century where technocrats rule and robots take care of humans' every need. Your house watches you, knows your secrets, and talks to you. And your closest friend can be—a machine? Gavin Bell and his teenage sister Fleur come from a middle-class family. Their much-loved, old-fashioned robot, Grumps, is running down and can't be repaired, so a scientist friend loans them EGR3, an experimental new robot to help Grumps. EGR3, known as Eager, learns from his experiences, as a child would. He feels emotions—wonder, excitement, and loss. When the ultra high-tech, eerily human BDC4 robots begin to behave suspiciously, Eager and the Bells are drawn into a great adventure that is sometimes dark and often humorous. As Eager's extraordinary abilities are tested to the limit, he will try to find the answer to this

question: What does it mean to be alive? From the Hardcover edition.

This report details work done in a project involving spectroscopic studies, including data analysis and modeling, of star-formation regions using an ensemble of archival space-based data including some from the Infrared Space Observatory's Long Wavelength Spectrometer and Short Wavelength Spectrometer, and other spectroscopic databases. We will include four kinds of regions: (1) disks around more evolved objects; (2) young, low or high mass pre-main sequence stars in star-formation regions; (3) star formation in external, bright IR (infrared) galaxies; and (4) the galactic center. During this period, work proceeded fully on track and on time. Details on workshops and conferences attended and research results are presented. A preprint article entitled 'The Far Infrared Lines of OH as Molecular Cloud Diagnostics' is included as an appendix. The Playground Problem

Her She's the definition of lost. Doesn't know her name? Check. Cruelly beaten within an inch of her life? Check. No memory of anything that's happened since she woke up from that beating? Check. Losing a child she doesn't remember conceiving? Check. She hasn't felt anything but lost in a very long time. Then an old biker tells her danger is on the horizon. He sends her to a man that she instantly feels a connection with. A bone deep connection. Him He's the definition of despair. After

the death of his young wife while on a tour of duty in Afghanistan, he hasn't seen the appeal of participating in the world around him. He's lost the only thing he ever loved. He's been a shell of the man he once was. His only escape from reality is feeling the wind in his hair, going as fast as he can get his old Harley to take him. That's the only time he can push his demons back far enough to feel peace. That is until she screams his name.

Small-Town Mom

Storyteller say, This happened on a time, on a little island off the coast of South Carolina. A girl named Sukey lived with her ma and new step-pa. Sukey called her step-pa "Mister Hard-Times." Every day, while he watched, she hoed the weeds in the garden and every day, she sang: Mister Hard-Times, Since you come My ma don't like me, My work never done. But one morning, when her step-pa wasn't looking, Sukey ran away to her secret hiding place by the sea and unwittingly called up Mama Jo, a beautiful black mermaid. The adventures that followed changed her life forever. In this dream-woven story, artfully retold by Robert D. San Souci from an American folktale, a poor girl finds her wishes answered not by treasure, or the sea's magic, but by goodness and love.

Digital Marketing Analytics

Metadata research has emerged as a discipline cross-cutting many domains, focused on the provision of distributed descriptions (often called annotations) to Web resources or applications. Such associated descriptions are supposed to serve as a foundation for advanced services in many application areas, including search and location, personalization, federation of repositories and automated delivery of information. Indeed, the Semantic Web is in itself a concrete technological framework for ontology-based metadata. For example, Web-based social networking requires metadata describing people and their interrelations, and large databases with biological information use complex and detailed metadata schemas for more precise and informed search strategies. There is a wide diversity in the languages and idioms used for providing meta-descriptions, from simple structured text in metadata schemas to formal annotations using ontologies, and the technologies for storing, sharing and exploiting meta-descriptions are also diverse and evolve rapidly. In addition, there is a proliferation of schemas and standards related to metadata, resulting in a complex and moving technological landscape — hence, the need for specialized knowledge and skills in this area. The Handbook of Metadata, Semantics and Ontologies is intended as an authoritative reference for students, practitioners and researchers, serving as a roadmap for the variety of metadata schemas and ontologies available in a number of key domain areas, including culture, biology, education, healthcare, engineering and library science.
