Elegant, brutal, and profound—this magnificent debut captures the grit and glory of modern Hawai'i with breathtaking force and accuracy. In a stunning collection that announces the arrival of an incredible talent, Kristiana Kahakauwila travels the islands of Hawai'i, making the fabled place her own. Exploring the deep tensions between local and tourist, tradition and expectation, façade and authentic self, *This Is Paradise* provides an unforgettable portrait of life as it's truly being lived on Maui, Oahu, Kaua'i and the Big Island. In the gut-punch of "Wanle," a beautiful and tough young woman wants nothing more than to follow in her father's footsteps as a legendary cockfighter. With striking versatility, the title story employs a chorus of voices—the women of Waikiki—to tell the tale of a young tourist drawn to the darker side of the city's nightlife. "The Old Paniolo Way" limns the difficult nature of legacy and inheritance when a patriarch tries to settle the affairs of his farm before his death. Exquisitely written and bursting with sharply observed detail, Kahakauwila's stories remind us of the powerful desire to belong, to put down roots, and to have a place to call home.

This book provides a sophisticated and descriptive introduction to biodiesel. It deals with matters related to the quality of biodiesel, efficiency of combustion engines and the products that they discharge. Novel ways to define biodiesel properties are mentioned and how feedstocks, contaminants and production procedures can affect the quality of biodiesel have also been assessed. The

performance of combustion engines has been assessed when fuelled with biodiesel with respect to the use of biofuel. Glycerol is one of the major byproducts of biodiesel. Its applications as raw material for biotechnological procedures and modern bio-refineries have also been discussed in this book.

"Rucker's four Ware novels—Software, Wetware, Freeware, and Realware—form an extraordinary cyberweird future history with the heft of an epic fantasy novel and the speed of a quantum processor. Still exuberantly fresh despite their age, they primarily follow two characters (and their descendants): Cobb Anderson, who instigated the first robot revolution and is offered immortality by his grateful "children," and stoner Sta-Hi Mooney, who (against his impaired better judgment) becomes an important figure in robot-human relations. Over several generations, humans, robots, drugs, and society evolve, but even weird drugs and the wisdom gathered from interstellar signals won't stop them from making the same old mistakes in new ways. Rucker is both witty and serious as he combines hard science and sociology with unrelentingly sharp observations of all self-replicating beings. This classic series well deserves its omnibus repackaging, particularly suitable for libraries." — Publisher's Weekly. "Rudy Rucker is one of the modern heroes of science fiction, one of the original cyberpunks. The early cyberpunks only had a few writers who could be meaningfully called punks — writers like John

Shirley and Richard Kadrey — but there was only one who could truly be called cyber: Rudy Rucker. Rucker is a mad professor, a mathematician and computer scientist with a serious, scholarly interest in the limits of computation and the physics and mathematics of higher-dimension geometry. But that's just about the only thing you can describe as 'serious' when it comes to Rucker. He's a gonzo wildman, someone for whom 'trippy' barely scratches the surface. His work is shot through with weird sex, weird drugs, weird brain chemistry, and above all, weird science." — Cory Doctorow

The Ware Tetralogy

The historic June 2000 North-South summit spawned new hopes for the future of Korea. The prospect of winding down a half-century of confrontation on the Korean peninsula seemed within the realm of possibility. North Korea's secretive leader Kim Jong Il suddenly emerged as a public figure and Pyongyang rapidly established diplomatic ties with a host of America's friends in Europe and Asia. Yet as the months have passed, even if Korea has turned a page in its history, none of the

basic issues of the Korea question have been resolved. A new administration in Washington faces a new set of challenges in Korea with profound implications for U.S. interests in East Asia. Tensions remain lower than at any time in recent memory, but the demilitarized zone separating North from South Korea remains the most heavily armed border on earth. North-South relations face an uncertain future, and few signs of real change inside North Korea are evident. There is growing uncertainty surrounding the direction of inter-Korean relations, the prospects for dealing with North Korea, and the likelihood for reform in Pyongyang. The task force, co-chaired by Morton I. Abramowitz and James T. Laney, argues that diplomatic gains in recent years are not irreversible. Successful implementation of the Agreed Framework between the United States and North Korea, which froze Pyongyang's known nuclear program in exchange for two light-water reactors and other economic benefits, faces considerable challenges inherited by the Bush administration. Despite eleventh-hour talks on North Korea's ballistic missile program in the waning weeks of the Clinton administration, it remains largely unconstrained. The conventional armsstandoff at the 38th parallel also continues unabated. Verification, too, persists as a key problem facing both the nuclear and missile issues.

ARM Architecture Reference Manual

In *The Irrational Atheist* Vox Day, writer, columnist and software designer, challenges three authors, Sam Harris, Richard Dawkins and Christopher Hitchens, on their own ground—reason itself. Day argues persuasively that Dawkins, Harris and Hitchens employ false assertions and faulty reasoning throughout their works. From the assertion that religion drives wars to the analysis showing blue states are more moral than red states, Day, in this rigorously documented work, dissects the

false conclusions and shows exactly why they are wrong. The Irrational Atheist does not argue from a religious or Biblical perspective—its arguments are purely based on hard factual data and careful reasoning.

"A WORK OF GREAT DRAMATIC POWER climaxing in the final hundred pages where

he writes a full, searing narrative of the patriot leaders' last days . . . It's powerful stuff." --The Sunday Press (Ireland) On Easter Monday of 1916, a thousand Irish men and women, armed with pikes and rifles, took over the center of Dublin and proclaimed a republic. It was a rash, doomed, symbolic uprising, and the rebel leaders knew it. Crack British troops killed and wounded hundreds of the rebels in the week of fighting, and British artillery shells left Dublin's city center in ruins. But the Rising of 1916 was not in vain. The short-lived insurrection and the subsequent executions of sixteen rebel leaders galvanized the Irish people. The overthrow of seven centuries of British rule in Ireland began on Easter Monday, 1916. In *Rebels*, Peter de Rosa, author of the bestselling *Vicars of Christ*, tells the story of the 1916 Rising in all its terror and beauty. With the dramatic flair of a novelist and the scrupulous accuracy of a professional historian, de Rosa brings to life the people, passions, politics, and repercussions of this historic event. Mathematical Modeling, Third Edition is a general introduction to an increasingly crucial topic for today's mathematicians. Unlike textbooks focused on one kind of mathematical model, this book covers the broad spectrum of modeling problems, from optimization to dynamical systems to stochastic processes. Mathematical modeling is the link between mathematics and the rest of the world. Meerschaert shows how to refine a question, phrasing it in precise mathematical terms. Then he encourages students to reverse the process, translating the mathematical solution back into a comprehensible, useful answer to the original question. This textbook mirrors the process professionals must follow in solving complex problems. Each chapter in this book is followed by a set of challenging exercises. These exercises

require significant effort on the part of the student, as well as a certain amount of creativity. Meerschaert did not invent the problems in this book--they are real problems, not designed to illustrate the use of any particular mathematical technique. Meerschaert's emphasis on principles and general techniques offers students the mathematical background they need to model problems in a wide range of disciplines. Increased support for instructors, including MATLAB material
New sections on time series analysis and diffusion models
Additional problems with international focus such as whale and dolphin populations, plus updated optimization problems
