This textbook guides the reader towards various

aspects of growth and international trade in a Diamond-type overlapping generations framework. Using the same model type throughout the book, timely topics such as growth with bubbles, debt reduction in rich countries and policies to mitigate climate change are explored . The first part starts from the “old” growth theory and bridges to the “new” growth theory (including R&D and human capital approaches). The second part presents an intertemporal equilibrium theory of inter and intra-sectoral trade and concludes by analyzing the debt mechanics inducing the huge imbalances among eurozone countries. The book is primarily addressed to graduate students wishing to proceed to the analytically more demanding journal literature.

This is the first multi-volume collection of major writings on cultural anthropology, the sub-field of anthropology which is concerned with how people in different places live and understand the world around them. It covers key methodologies (participant observation, ethnography) and topics (kinship, ritual, values) and maps the development of the field from its beginnings in the mid-nineteenth century through to recent and current debates on the 'critique of anthropology' and the rise of new methodologies such as multi-sited research. The four volumes are arranged thematically and each is separately introduced. Drawing upon essays from anthropology and related disciplines, the volumes together chart the origins of the field, explore its core theories and

methods, and trace the proliferation of sub-fields that it has generated, including anthropology of art, urban anthropology, medical anthropology and the anthropology of gender and sexuality.

Too many companies are managed not by leaders, but by mere role players and faceless bureaucrats. What does it take to be a real leader—one who is confident in who she is and what she stands for, and who truly inspires people to achieve extraordinary results? Rob Goffee and Gareth Jones argue that leaders don't become great by aspiring to a list of universal character traits. Rather, effective leaders are authentic: they deploy individual strengths to engage followers' hearts, minds, and souls. They are skillful at consistently being themselves, even as they alter their behaviors to respond effectively in changing contexts. In this lively and practical book, Goffee and Jones draw from extensive research to reveal how to hone and deploy one's unique leadership assets while managing the inherent tensions at the heart of successful leadership: showing emotion and withholding it, getting close to followers while keeping distance, and maintaining individuality while "conforming enough."

Underscoring the social nature of leadership, the book also explores how leaders can remain attuned to the needs and expectations of followers. *Why Should Anyone Be Led By You?* will forever change how we view, develop, and practice the art of leadership,

Bioactive compounds play a central role in high-value product development in the chemical industry. Bioactive compounds have been identified from diverse sources and their therapeutic benefits, nutritional value and protective effects in human and animal healthcare have underpinned their application as pharmaceuticals and functional food ingredients. The orderly study of biologically active products and the exploration of potential biological activities of these secondary metabolites, including their clinical applications, standardization, quality control, mode of action and potential biomolecular interactions, has emerged as one of the most exciting developments in modern natural medicine. *Biotechnology of Bioactive Compounds* describes the current stage of knowledge on the production of bioactive compounds from microbial, algal and vegetable sources. In addition, the molecular approach for screening bioactive compounds is also discussed, as well as examples of

applications of these compounds on human health. The first half of the book comprises information on diverse sources of bioactive compounds, ranging from microorganisms and algae to plants and dietary foods. The second half of the book reviews synthetic approaches, as well as selected bioactivities and biotechnological and biomedical potential. The bioactive compounds profiled include compounds such as C-phycocyanins, glycosides, phytosterols and natural steroids. An overview of the usage of bioactive compounds as antioxidants and anti-inflammatory agents, anti-allergic compounds and in stem cell research is also presented, along with an overview of the medicinal applications of plant-derived compounds. *Biotechnology of Bioactive Compounds* will be an informative text for undergraduate and graduate students of biomedical chemistry who are keen to explore the potential of bioactive natural products. It also provides useful information for scientists working in various research fields where natural products have a primary role.

The existence of multiple sulfotransferases (SULTS) was first discovered in 1958. Since then, any attempts to create a comprehensive text dedicated to sulfation and sulfotransferases have been rare and, thanks to rapid advances in molecular biology and biochemistry, quickly outdated. However, those advances have permitted an accelerated understanding of human sulfotransferase activity and with it the creation of a growing database on sulfotransferases that, until now, has remained scattered in the literature. Human Cytosolic Sulfotransferases serves an important function by the

mere feat of culling the information from the literature to present an up-to-date summary of the field. Fortunately, the editors have gone a step further in providing us with a multidisciplinary overview of human sulfotransferases, covering not only basic biochemistry, genetics, and molecular biology, but also exploring current clinical uses involving pharmacology, enzymology, and environmental toxicology. The book's thirteen chapters, written by some of the most renowned scientists in the field, address the huge diversity of topics that are impacted by sulfation. Included are discussions that move from general nomenclature and structure to molecular cloning of human cytosolic sulfotransferases, and sulfate conjugation in pharmacogenetics and pharmacogenomics. Entire chapters focus on sulfotransferases in the human fetus and neonate, sulfation of thyroid hormones, as well as estrogen sulfotransferases in breast cancer and the activation/inactivation of carcinogens and mutagens by human sulfotransferases.

This fascinating tale relates the story of the Italian Gilera marque, from the first belt-driven bike introduced in 1909 through the marque's 1935 takeover of Rondine; its moderately successful mid-1930s to early-1960s, four-cylinder race models; its acquisition by Piaggio in 1969; and the last Gilera built in 1993. Prolific motorcycle author Mick Walker offers background histories and complete specs for all road and race models, along with a generous selection of archival photography and a special eight-page color section. A final chapter brings the Gilera story full circle with the latest on Piaggio's resurrection of the marque in the form of a new road bike produced under the auspices of Bimota.
