Cultures and Institutions of Natural History

Phospholipid technology and applications is an essential reference for technologists developing food and cosmetics products, scientists researching phospholipids in biological and food systems, technologists in fats and oils refining, and scientists developing drugs and drug delivery systems and carriers. The major source of phospholipids is the lecithin recovered during degumming of vegetable oils, particularly soybean oil. This crude material finds uses in its own right but can be purified through a series of processes which eventually lead to individual phospholipid classes such as phosphatidylcholines. It is widely accepted that oil and water do not mix but there are several areas in science and technology where these two distinct phases must coexist in stable emulsions. This is achieved by admixture of amphiphilic molecules of which the phospholipids are important natural examples. Today, phospholipids find many uses in the food industry and in other industries which exploit the amphiphilic nature of these compounds. Further, there are now important procedures by which their amphiphilicity can be optimized for different uses. The early chapters in this book are devoted to the more common glycerol-based phospholipids and cover their structure, source, composition, modification by chemical and enzymatic methods, their physical, chemical, and nutritional properties, and their major uses. The final chapter is devoted to another kind of phospholipid, the sphingolipids, in which there is a growing interest.

Windows XP Home Edition Complete

Finally, a complete print edition of the latest US Army Survival Field Manual! Unlike others, which are hurriedly put together from internet-sourced text files and low-res pictures and tables, this edition is complete and unadulterated with high-resolution graphics and images. The page count, table of contents, illustrations, photos, tables, index and appendices are all precisely where they should be in this definitive 676 page print edition. As far as military survival training manuals go, there are none to equal FM 3-05.70 Survival for sheer usefulness. When tasked with updating the old and outdated FM 21-76 Survival back in the late 1990s, those SERE experts at the US Army's John F Kennedy Special Warfare Center and School took their collective decades of field survival experience and combined it all with classic and effective survival methods; traditional bushcraft and primitive skills and wrapped it all up in a highly-practical, exhaustively-tested, scholarly and encyclopedic approach to rescue, survival psychology and living off the land in order to ensure our fighting men and women have the best chance to make it home from any given survival situation. As a result, these Special Forces SERE experts made Field Manual 3-05.70 one of the best military survival guides ever written! FM 3-05.70 Survival covers topics such as: The psychology of survival; Survival kits; Survival planning; Survival medici≠ Shelter; Water; Firecraft; Food; Wild edibles; Poisonous plants; Dangerous animals; Improvised weapons; Tools; Desert survival; Jungle survival; Cold weather survival; Survival at sea; Expedient navigation; Signaling; Evasion; Movement in hostile areas; And much, much more! Aside from the obvious military uses for the techniques described in this manual, the prepper, outdoorsman and woman will find the manual indispensable. Studying it will make you better in the bush, and as a bonus, it could save your life! This field-sized edition makes it easy to throw into your ruck while practicing the techniques in the field. Every prepper, sportsman and outdoorsman should own a proper, readable print copy of this outstanding survival reference manual!

A mystical soft sci-fi for older teens and adults. At an unspecified time in the future a spiritual group of Earthlings establish their utopian society on a small Goldilocks planet at the edge of the known universe. It is here on Aquarius that Lily Reynolds spends a carefree childhood among the hills, streams and meadows of this new Eden. When the colonists have completed the building of homes and a school, tragedy strikes in the form of a deadly virus. Only twelve people survive, all of them children. Lily at the age of eleven, is the oldest. With no communication to other worlds, the youngsters wait for a promised starship for rescue. But it does not come. The children turn into teenagers with a limited knowledge of adult relationships. They have only each other and a few books to guide them. In time the teens become attuned to the mystical vibrations of the planet, as the Mansions of Karma appear periodically in the sky to remind them they are not alone, but forever a part of the great universal life force. And then one day the starship actually does come, but it is not there on a rescue mission

A Fellowship of Men and Women

This text is the product of several years' effort to develop a course to fill a specific educational gap. It is our belief that computer science students should know how a computer works, particularly in light of rapidly changing tech nologies. The text was designed for computer science students who have a calculus background but have not necessarily taken prior physics courses. However, it is clearly not limited to these students. Anyone who has had first-year physics can start with Chapter 17. This includes all science and engineering students who would like a survey course of the ideas, theories, and experiments that made our modern electronics age possible. This textbook is meant to be used in a two-semester sequence. Chapters 1 through 16 can be covered during the first semester, and Chapters 17 through 28 in the second semester. At Queens College, where preliminary drafts have been used, the material is presented in three lecture periods (50 minutes each) and one recitation period per week, 15 weeks per semester. The lecture and recitation are complemented by a two-hour laboratory period per week for the first semester and a two-hour laboratory period biweekly for the second semester.

Key sectors of modern economies depend highly on ICT. The information flowing through the resulting technological super-infrastructure as well as the information being processed by the complex computing systems that underpin it becomes crucial because its disruption, disturbance or loss can lead to high financial, material and, sometimes, human loss. As a consequence, the security and dependability of this infrastructure become critical and its protection a major objective for governments, companies and the research community. CRITIS has been born as an event that aims to bring together researchers and professionals from universities, private companies and public administrations interested or involved in all security-related heterogeneous aspects of critical information infrastructures. This volume contains the proceedings of the 1st International Workshop on Critical Information Infrastructure Security (CRITIS 2006), that was held between August 31 and September 1, 2006 on Samos, Greece, and was hosted by the University of the Aegean, Department of Information and Communication Systems Engineering, Laboratory of Information and Communication Systems Security (Info-Sec-Lab). In response to the CRITIS 2006 call for papers, 57 papers were submitted. Each paper was reviewed by three members of the Program Committee, on the basis of significance, novelty, technical quality and relevance to critical infrastructures. At the end of the reviewing process, only 22 papers were selected for presentation, resulting in an acceptance rate of 38%. Revisions were not checked and the authors bear full responsibility for the content of their papers.

Physics for Computer Science Students

This book proposes a revisionist approach to democratic politics. Yaron Ezrahi focuses on the creative unconscious collective imagination that generates ever-changing visions of legitimate power and authority, which compete for enactment and institutionalization in the political arena. If, in the past, political authority was grounded in fictions such as the divine right of kings, the laws of nature, historical determinism and scientism, today the space of democratic politics is filled with multiple alternative social imaginaries of the desirable political order. Exposure to electronic mass media has made contemporary democratic publics more aware that credible popular fictions have greater impact on shaping our political realities than do rational social choices or moral arguments. The pressing political question in contemporary democracy is, therefore, how to select and enact political fictions that promote peace and how to found the political order on checks and balances between alternative political imaginaries of freedom and justice.

Excerpt from Cultures and Institutions of Natural History: Essays in the History and Philosophy of Science This volume consists mainly of papers delivered at two meetings cosponsored by the Museo Civico di Storia Naturale in Milan and the California Academy of Sciences in San Francisco. The first, on the Culture of Natural History, was held in Milan, November 14 - 16, 1996. The second, on Institutions of Natural History, was held in San Francisco, October 5 - 7, 1998. They followed two earlier conferences on Biology as History (pinna and Ghiselin 1996; Ghiselin and Pinna 1996) likewise held in Milan and San Francisco. We intend to continue the series of meetings and have publications based on them in commemoration of the Academy's sesquicentennial in 2003. The emphasis here is mainly upon natural history museums and the kind of science that goes on in them. Although the essays were originally written to stand by themselves, when arranged in chronological order they suggest a common theme. To paraphrase Darwin, the culture and institutions of natural history have been, and are being, evolved. They have adapted to local circumstances, diversified, and sometimes even progressed. We may hope that the future holds more than just retrogression and extinction in store. Read as case studies the essays provide valuable insights into not just how, but why, the institutions have come into being and subsequently been transformed. Previous generations had quite different ideas than we do about how a collection of naturalia is supposed to function and how it should be organized. And there were conflicting goals and serious disputes about policy, much as there are today. Often, though not always, the institutions turn out to be very different from what had been envisioned by their founders.
