The Photographic Journal

What you need is a guide that explains the purpose and function of the D750's basic controls, how you should use them, and why. Ideally, there should be information about file formats, resolution, aperture/priority exposure, and special autofocus modes, but you'd prefer to read about those topics only after you've had the chance to go out and take a few hundred great pictures with your new camera. Why isn't there a book that summarizes the most important information in its first two or three chapters, with lots of illustrations showing what your results will look like when you use this setting or that? This is that book.

With new color pictures and improved print quality, this book covers the early history of Hasselblad, from the very early cameras before the Hasselblad name was used on them, and camera numbers manufactured are also listed. The sales literature as well as instruction books have been catalogued with illustrations going right back to the early material, and some of the promotional items are illustrated and listed. Finally, a very comprehensive index both of the Hasselblad code numbers and item index, as well as a comprehensive bibliography are included. Tables showing all the lenses available over the years with starting and finishing manufacture numbers and dates. In *The Nikon Autofocus System, 2nd Edition*, photographer Mike Hagen, author of the bestselling *The Nikon Creative*

Lighting System, takes his deep knowledge of Nikon technology and concentrates on its focus features. In this book, which covers all current Nikon DSLR models (including the D5 and D500), Hagen fully explains how Nikon autofocus works, including detailed discussions of all the autofocus modules, drive systems, and camera buttons and menus. He also devotes an entire chapter to explore how focus works with Nikon's lenses.

Armed with this general knowledge, Hagen then dives deep and offers camera setups, settings, and best practices for specific field techniques that address the photographic genres that are notoriously challenging for focus: action and sports (indoor and outdoor), wildlife (including birds in flight), and macro photography. He also covers genres such as portrait, landscape, underwater, low-light, and street photography. Hagen not only advises on the best ways to set up the camera and focus systems, he gives helpful tips and tricks throughout the book.

The Nikon Autofocus System also covers:

- Live view autofocus methods and settings
- Achieving great focus in video
- AF tracking
- AF shooting styles, such as back-button AF and shutter-release AF
- HDR, panoramas, and other techniques for shooting with a tripod
- An entire chapter on additional terms and techniques, such as hyperfocal distance, calibrating lenses, focus and flash photography, and more
