Measures for Research and Evaluation in the English Language Arts

This was my first book and a true labor of love. I spent decades studying steam and the work of Dead Men, in both old buildings and on library shelves. I traveled the country, haunting used-book stores, looking for engineering books that held the answers to questions that nagged at me. I was obsessed with this topic, and when I finally sat to write, I poured all that I had learned into this book, and as I wrote, I tried my best to make the words sound good to you - like we were together and

having a conversation. I wanted you to know what I know and I wanted you to be able to do what I can do when it comes to old steam systems. This book arrived in 1992 and has since gone through dozens of printings. We've sold it in every state as well as in foreign countries. Steam heat is everywhere there are old buildings, so why shouldn't you be the one with the answers? Dan Holohan

Musings of an Energy Nerd

In this fascinating collection of postings from his popular “Musings of an Energy Nerd” blog, Green Building Advisor's Martin Holladay cuts through the hype and myths about energy efficiency, sustainability, and green building to present the very best ways to make your home more energy efficient. Martin Holladay has been making weekly postings to his “Musings of an Energy Nerd” blog on Green Building Advisor since January 2009. Along the way, he has gathered a devoted following of “energy nerds” who await his weekly musings with rapt anticipation. For the first time, the 50 most popular postings have been assembled in book form to give homeowners a great opportunity to live a more energy-efficient life in their homes. The book begins with an overview of energy priorities, and a discussion of what we mean by terms like green and sustainable. Martin presents several options for energy upgrades for an existing house (from replacing windows to adding superinsulation) before looking at ways to improve the energy efficiency of a new house. Separate chapters follow on HVAC, domestic hot water, appliances, and renewable energy, before the book wraps up with an eye-opening chapter on useless products, scams, and myths (including Martin's list of “Stupid Energy-Saving Tips”).

The Day the Universe Changed presents a sweeping view of the history of science, technology, and human civilization and examines the moments in history when a change in knowledge radically altered man's understanding of himself and the world around him. James Burke examines eight periods in history when our view of the world shifted dramatically: In the eleventh century, when extraordinary discoveries were made by Spanish crusaders. In fourteenth-century Florence, where

perspective in painting emerged. In the fifteenth century, when the advent of the printing press shook the foundations of an oral society. In the sixteenth century, when gunnery developments triggered the birth of modern science. In the early eighteenth century, when hot English summers brought on the Industrial Revolution. In the battlefield surgery stations of the French revolutionary armies, where people first became statistics. In the nineteenth century, when the discovery of dinosaur fossils led to the theory of evolution. In the 1820s, when electrical experiments heralded the end of scientific certainty. Based on the popular television documentary series, *The Day the Universe Changed* is a bestselling history that challenges the reader to decide whether there is absolute knowledge to discover-or whether the universe is "ultimately what we say it is."

Based on a detailed examination of New York case law, this pathbreaking book shows how law, politics, and ideology in the state changed in tandem between 1920 and 1980. Early twentieth-century New York was the scene of intense struggle between white, Anglo-Saxon, Protestant upper and middle classes located primarily in the upstate region and the impoverished, mainly Jewish and Roman Catholic, immigrant underclass centered in New York City. Beginning in the 1920s, however, judges such as Benjamin N. Cardozo, Henry J. Friendly, Learned Hand, and Harlan Fiske Stone used law to facilitate the entry of the underclass into the economic and social mainstream and to promote tolerance among all New Yorkers. Ultimately, says William Nelson, a new legal ideology was created. By the late 1930s, New Yorkers had begun to reconceptualize social conflict not along class lines but in terms of the power of majorities and the rights of minorities. In the process, they constructed a new approach to law and politics. Though doctrinal change began to slow by the 1960s, the main ambitions of the legalist reformation--liberty, equality, human dignity, and entrepreneurial opportunity--remain the aspirations of nearly all Americans, and of much of the rest of the world, today.

The eminent architect Edward Larrabee Barnes is a member of the generation of influential modernists that emerged in America after World War II. After studying architecture at Harvard University under Bauhaus masters Marcel Breuer and Walter Gropius, Barnes set up his own practice in New York in 1949. Since then, over the course of a long and varied career, he has worked in a modern vocabulary shaped by his own approach to geometry, composition, and siting. Barnes is a fellow

of the American Institute of Architects and has received the AIA Twenty-Five-Year Award, the Thomas Jefferson Medal in Architecture, the Harvard University 350th Anniversary Medal, and some forty other awards for design excellence. The projects in this monograph present the full range of Barnes' work: office buildings, museums, botanical gardens, private houses, churches, schools, camps, colleges, campus planning, and housing. The extraordinary Dallas Museum of Art and the much-admired Walker Art Center in Minneapolis are among the museums shown. The houses include his best known, among them the Osborn, Hecksher, and Dallas houses. Office buildings presented include the dramatic IBM Building at Madison Avenue and Fifty-seventh Street with its popular interior bamboo garden, the office tower at 599 Lexington Avenue, both in New York, and the Federal Judiciary Building in Washington, D.C. Among the academic projects are the early, widely influential Haystack Mountain School of Crafts, Camp Hidden Valley for the Fresh Air Fund, dormitories at St. Paul's School, arts facilities at the Emma Willard School and Bowdoin College, and several campus plans, including those for the State University of New York at Purchase and the Christian Theological Seminary in Indianapolis. Peter Blake's introduction presents Barnes' work in both its architectural and cultural contexts. Blake also discusses Barnes' background and the evolution of his designs over the years, closely analyzing particular built works. Barnes' personal comments on each project provide further insight.
