This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.

Ever struggled to find the right words to talk about the threat of pornography with your kids? Too many of us avoid the subject, depending on simple technology filters to protect them. Yet children at very early ages are under attack and at risk to fall prey to pornography addiction. As parents, we must be prepared to deal with the issue head-on. Every Parent's Battle: A Family Guide to Resisting Pornography not only exposes the frightening prevalence of pornography in our sex-obsessed culture, it equips parents with concrete and tested strategies to educate their kids about intimacy, human dignity, and sexuality as God intended it to be. "Dan Spencer's new book … provides Catholic and other parents with tools and strategies that are aimed at prevention, rather than recovery, in the spiritual battle for the virtue of chastity…. I heartily recommend this book for your family's happiness and the joyful embracing of life and dignity offered to us by Jesus Christ." — ARCHBISHOP JOSEPH F. NAUMANN, ARCHDIOCESE OF KANSAS CITY, KANSAS "The Roman Empire was a pornographic society - with all the misery that implies - but our own society is far worse. History shows that this problem can be overcome in only one way: the way of the Christian family. Dan Spencer shows us, in practical terms, what that means for us as parents. Reading this book is not just a good idea. It's a duty." — MIKE AQUILINA, EWTN HOST AND AUTHOR OF SEVEN REVOLUTIONS: HOW CHRISTIANITY CHANGED THE WORLD AND CAN CHANGE IT AGAIN

Education under attack – 2010

Approximately 4 million U.S. service members took part in the wars in Afghanistan and Iraq. Shortly after troops started returning from their deployments, some active-duty service members and veterans began experiencing mental health problems. Given the stressors associated with war, it is not surprising that some service members developed such mental health conditions as posttraumatic stress disorder, depression, and substance use disorder. Subsequent epidemiologic studies conducted on military and veteran populations that served in the operations in Afghanistan and Iraq provided scientific evidence that those who fought were in fact being diagnosed with mental illnesses and experiencing mental healthâ€"related outcomesâ€"in particular, suicideâ€"at a higher rate than the general population. This report provides a comprehensive assessment of the quality, capacity, and access to mental health care services for veterans who served in the Armed Forces in Operation Enduring Freedom/Operation Iraqi Freedom/Operation New Dawn. It includes an analysis of not only the quality and capacity of mental health care services within the Department of Veterans Affairs, but also barriers faced by patients in utilizing those services.
