The Book of Ninja, the ultimate ninjutsu manual, was penned in 1676 by a ninja known as Fujibayashi. Born in the post-civil war era of Japan, Fujibayashi collected and combined information from the ninja clans of Iga - regarded to be the homeland of the ninja - and compiled it into an authoritative book. Known as The Bansenbukai, this book has now been translated into English by the Historical Ninjutsu Research Team. It is widely considered to be the 'bible' of 'ninjutsu', the arts of the ninja. The Book of Ninja begins with an in-depth introduction to the history of Fujibayashi's scripture. Then the teachings themselves, appealingly rendered in this translation, take us into the secrets of guerilla warfare and espionage. We learn how to become the ultimate spy, whether through a network of spies or by hiding in plain sight. Through the stealth and concealment tactics of night-time infiltration and through weapon and tool building skills, as well as mission planning, we can learn much both about warfare and about adopting the right mindset for tackling our own inner and outer enemies. Adding to the mix for the spycraft lover, there are sections on capturing criminals, performing night raids, making secret codes and signs, and even techniques for predicting the weather and using an esoteric Buddhist system of divination. An exciting and engaging tome of lost knowledge, The Book of the Ninja is the final say in the world of the ninja and the

ultimate classic for samurai and ninja enthusiasts alike.

The launch of Sputnik in 1957 not only began the space age, it also showed that Soviet rockets were more powerful than American ones. Within months, the US Air Force hired Rocketdyne for a feasibility study of an engine capable of delivering

at least 1 million pounds of thrust. Later, NASA ran the development of this F-1 engine in order to use it to power the first stage of the Saturn V rocket that would send Apollo missions to the Moon. It is no exaggeration to say that without the F-1 engine NASA would not have been able to achieve President Kennedy's 1961 challenge to his nation to land a man on the Moon before the decade was out.

Back to the Future: DeLorean Time Machine

This newly reissued debut book in the Rutgers University Press Classics Imprint is the story of the search for a rocket propellant which could be trusted to take man into space. This search was a hazardous enterprise carried out by rival labs who worked against the known laws of nature, with no guarantee of success or safety. Acclaimed scientist and sci-fi author John Drury Clark writes with irreverent and eyewitness immediacy about the development of the explosive fuels strong enough to negate the relentless restraints of gravity. The resulting volume is as much a memoir as a work of history, sharing a behind-the-scenes view of an enterprise which eventually took men to the moon, missiles to the planets, and

satellites to outer space. A classic work in the history of science, and described as “a good book on rocket stuff...that’s a really fun one” by SpaceX founder Elon Musk, readers will want to get their hands on this influential classic, available for the first time in decades.

Journalist Walls grew up with parents whose ideals and stubborn nonconformity were their curse and their salvation. Rex and Rose Mary and their four children lived like nomads, moving among Southwest desert towns, camping in the mountains. Rex was a charismatic, brilliant man who, when sober, captured his children's imagination, teaching them how to embrace life fearlessly. Rose Mary painted and wrote and couldn't stand the responsibility of providing for her family. When the money ran out, the Walls retreated to the dismal West Virginia mining town Rex had tried to escape. As the dysfunction escalated, the children had to fend for themselves, supporting one another as they found the resources and will to leave home. Yet Walls describes her parents with deep affection in this tale of unconditional love in a family that, despite its profound flaws, gave her the fiery determination to carve out a successful life. -- From publisher description.

Training to Fly - Military Flight Training 1907-1945

Jonathan Ward takes the reader deep into the facilities at Kennedy Space Center to describe NASA's first computer systems used for spacecraft and rocket checkout and explain how tests and launches proceeded. Descriptions of early operations include a harrowing account of the heroic efforts of pad workers during the Apollo 1 fire. A companion to the author's book *Countdown to a Moon Launch: Preparing Apollo for Its Historic Journey*, this explores every facet of the facilities that served as the base for the Apollo/Saturn missions. Hundreds of illustrations complement the firsthand accounts of more than 70 Apollo program managers and engineers. The era of the Apollo/Saturn missions was perhaps the most exciting period in American space exploration history. Cape Canaveral and Kennedy Space Center were buzzing with activity. Thousands of workers came to town to build the facilities and launch the missions needed to put an American on the Moon before the end of the decade. Work at KSC involved much more than just launching rockets. It was a place like none other on Earth. Technicians performed intricate operations, and hazards abounded everywhere, including lightning, fire, highly-toxic fuels, snakes, heat, explosives, LOX spills, and even plutonium. The reward for months of 7-day workweeks under intense pressure was witnessing a Saturn V at liftoff. For anyone who ever wished they had worked at Kennedy Space Center during the Apollo era, this book is the next best thing. The only thing missing is the smell of rocket fuel in the morning.

"The risk of engine failure is greatest when your engine is young, NOT when it's old. You should worry more about pediatrics than geriatrics." -Mike Busch A&P/IA Mike Busch on Engines expands the iconoclastic philosophy of his groundbreaking first book Manifesto to the design, operation, condition monitoring, maintenance and troubleshooting of piston aircraft engines. Busch begins with the history and theory of four-stroke spark-ignition engines. He describes the construction of both the "top end" (cylinders) and "bottom end" (inside the case), and functioning of key systems (lubrication, ignition, carburetion, fuel injection, turbocharging). He reviews modern engine leaning technique (which your POH probably has all wrong), and provides a detailed blueprint for maximizing the life of your engine. The second half presents a 21st-century approach to health assessment, maintenance, overhaul and troubleshooting. Busch explains how modern condition monitoring tools-like borescopy, oil analysis and digital engine monitor data analysis-allow you to extend engine life and overhaul strictly on-condition rather at an arbitrary TBO. The section devoted to troubleshooting problems like rough running, high oil consumption, temperamental ignition and turbocharging issues is worth its weight in gold. If you want your engine to live long and prosper, you need this book.

Aviation Mechanic Handbook

Evolutionary Tactics, A Blueprint for Action, The Real Light at the end of the tunnel from the Vietnam era. Sometimes it takes the perspective of history to unmask the true genius of a person, a book or a point of view. Perhaps even more telling, the first attempt to deal with the subject of Jim Channon's First Earth Battalion was through the vehicle of comedy. The Men Who Stare at Goats, the movie starring George Clooney did not treat the ideas at the core of the First Earth Battalion with anywhere near the attention they deserve. In fact one could say that the movie trivialized the concept through humor, and marginalized the principals as addled characters. The true nature of the First Earth Battalion can begin to be appreciated by reading the Operations Manual. A hand illustrated work of art highlighting a new direction for not just the military but the

planet as well. The fact that Jim felt the army could take the lead in this matter speaks to his own brand of practical idealism that untold numbers of corporate leaders took advantage of on his retirement from the Army. When Hitler unleashed Operation Barbarossa against the Soviet Union in June 1941, the 23-tonne Panzer III was in the vanguard of the German assault. The German Panzer III tank (official designation Panzerkampfwagen III, Sd Kfz 141, abbreviated to PzKpfw III) saw widespread use during the Second World War campaigns in Poland, France, the Soviet Union and the Balkans, and in North Africa with the famous Afrika Korps. A small number were still in use in Normandy (1944), at Anzio (1943), in Norway and Finland and in Operation Market Garden (1944). Some 5,774 were built between 1937 and 1943. Although the Panzer III was conceived to operate alongside the infantry-supporting Panzer IV to fight other tanks and armoured fighting vehicles, the roles were reversed when the German Army came up against the formidable Soviet T-34 tank. A tank with a more powerful anti-tank gun was needed so the Panzer IV with its larger turret ring and long-barrelled 7.5cm KwK 40 gun was used in tank-versus-tank battles, with the Panzer III being redeployed in the infantry support role. Production of the Panzer III ended in 1943, although its dependable chassis provided hulls for the Sturmgeschutz III (StuG III) assault gun, one of the most successful of the war, until the end of the war. Centrepiece of the Haynes Panzer III Tank Manual is the Bovington Tank Museum's PzKpfw III Ausf L, which has been restored to running condition. This tank belonged to the same battalion as the museum's famous Tiger I (the 501st (Heavy) Panzer Abteilung) and is an early production Ausf L, modified for tropical service. It was shipped via Naples to Benghazi in Libya in July 1942 and was issued to the 8th Panzer Regiment, part of the 15th Panzer Division and probably fought in the Battle of Alam Halfa. It was subsequently captured by the British Army and shipped to the UK. The Tank Museum has restored the tank to running order, has repainted it in its original camouflage and markings and is currently replacing many of the ancillary tools and equipment that it carried.
