## **Game-Theoretical Models in Biology**

This book describes the new generation of discrete choice methods, focusing on the many advances that are made possible by simulation. Researchers use these statistical methods to examine the choices that consumers, households, firms, and other agents make. Each of the major models is covered: logit, generalized extreme value, or GEV (including nested and cross-nested logits), probit, and mixed logit, plus a variety of specifications that build on these basics. Simulation-assisted estimation procedures are investigated and compared, including maximum simulated likelihood, method of simulated moments, and method of simulated scores. Procedures for drawing from densities are described, including variance reduction techniques such as antithetics and Halton draws. Recent advances in Bayesian procedures are explored, including the use of the Metropolis-Hastings algorithm and its variant Gibbs sampling. The second edition adds chapters on endogeneity and expectation-maximization (EM) algorithms. No other book incorporates all these fields, which have arisen in the past 25 years. The procedures are applicable in many fields, including energy, transportation, environmental studies, health, labor, and marketing.

### **Personal Relationships Across Cultures**

The author of the innovative sex and marriage blog “Married Man Sex Life” brings together his edgy and brilliant advice in a single volume primer delivering the motherload of substance. The Married Man Sex Life Primer 2011 cherry picks the best ideas of books like “The Mystery Method,” “No More Mr. Nice Guy,” and the volatile online world of the Pickup Artist a.k.a. “Game” community and merges them with a solid grounding in evolutionary psychology, sociology, biology and behavior modification. The result is a simple, effective plan for men to create sexually exciting marriages for themselves and their wives. The opening covers the underlying ancient “hard-wired” biological and modern social reasons women find men attractive. Athol pulls no punches here and the sexual motivations of women are laid bare. Though rather than framing women as sexually devious and seeking to advantage themselves over men, he explains how their sexual behavior is entirely rational in nature and once understood as such, it becomes very useful information. The second part of the book takes the framework developed in the first part and offers a wealth of tools to put it to practical use. The most important tool is The Male Action Plan, which charges the husband with the task of becoming a

better, sexier man and thereby leveraging his increased attractiveness for a better sex life with his wife. As Athol says, "whoever is the most attractive in the relationship is in charge." The third part of the book is a treasure trove of playful sexy and romantic moves women will find charming and engaging. It's clear that Athol could have a harem of young ladies, but here he displays an endless variety of playful instigation to continually charm just one. The final section is a catchall of serious topics on what not to do, how to choose a wife, the current state of marriage law and a crushingly simple approach to dealing with being cheated on. (Want a better man? Leave it where he can find it.)

Family Theories: An Introduction by James M. White, Todd F. Martin, and new co-author Kari Adamsons provides an incisive, thorough primer to current theories of the family that balances the diversity and richness of a broad scope of scholarly work in a concise manner. This best-selling text draws upon eight major theoretical frameworks developed by key social scientists to explain variation in family life. These frameworks include social exchange and choice, symbolic-interaction, family life course development, systems, conflict, feminist, ecological, and functional theories. This new Fifth Edition includes suggestions for integrating theory to guide a research program and more applications for those going on to careers in the helping professions. With an increased focus on both classical theories as well as

Why are most neurosurgeons male and most kindergarten teachers female? Why aren't there more women on death row? Why do so many male politicians ruin their careers with sex scandals? Why and how do we really fall in love? This engaging book uses the latest research from the field of evolutionary psychology to shed light on why we do the things we do? from life plans to everyday decisions. ### **An Introduction to Game-theoretic Modelling**

Until recently, evolutionary psychologists have considered human mating behavior to be universal and similar to other animals, painting a picture of human mating as visceral, animalistic, and instinctual. But that's not the whole story. In courtship and display, sexual competition and rivalry, we are guided by Mating Intelligence, or the range of psychological abilities designed for sexual reproduction. In this book, psychologists Glenn Geher and Scott Barry Kaufman take a fascinating tour of the intersection of r sing and intelligence by drawing on cutting-edge research on evolutionary psychology, intelligence, creativity, personality, social psychology, developmental psychology, neuroscience, epigenetics, and more. This book will change the way you think about sex, dating, love, and the human mind.

As acclaimed psychological researcher and author David Buss writes, "People are mesmerized by murder. It commands our attention like no other human phenomenon, and those touched by its ugly tendrils never forget." Though we may like to believe that murderers are pathological misfits and hardened criminals, the vast majority of murders are committed by people who, until the day they kill, would seem to be perfectly normal. David Buss's pioneering work has made major national news in the past, and this provocative book is sure to generate a storm of attention. *The Murderer Next Door* is a riveting look into the dark underworld of the human psyche—an astonishing exploration of when and why we kill and what

might push any one of us over the edge. A leader in the innovative field of evolutionary psychology, Buss conducted an unprecedented set of studies investigating the underlying motives and circumstances of murders, from the bizarre outlier cases of serial killers to those of the friendly next-door neighbor who one day kills his wife. Reporting on findings that are often startling and counterintuitive—the younger woman involved in a love triangle is at a high risk of being killed—he puts forth a bold new general theory of homicide, arguing that the human psyche has evolved specialized adaptations whose function is to kill. Taking readers through the surprising twists and turns of the evolutionary logic of murder, he explains exactly when each of us is most at risk, both of being murdered and of becoming a murderer. His findings about the high-risk situations alone will be news making. Featuring gripping storytelling about specific murder cases—including a never used FBI file of more than 400,000 murders and a highly detailed study of 400 murders conducted by Buss in collaboration with a forensic psychiatrist, and a pioneering investigation of homicidal fantasies in which Buss found that 91 percent of men and 84 percent of women have had at least one such vivid fantasy—*The Murderer Next Door* will be necessary reading for those who have been fascinated by books on profiling, lovers of true crime and murder mysteries, as well as readers intrigued by the inner workings of the human mind.

### **Bridges Not Walls**

A rollicking true-crime adventure about a rogue who trades in rare birds and their eggs—and the wildlife detective determined to stop him. On May 3, 2010, an Irish national named Jeffrey Lendrum was apprehended at Britain's Birmingham International Airport with a suspicious parcel strapped to his stomach. Inside were fourteen rare peregrine falcon eggs snatched from a remote cliffside in Wales. So begins a tale almost too bizarre to believe, following the parallel lives of a globe-trotting smuggler who spent two decades capturing endangered raptors worth millions of dollars as race champions—and Detective Andy McWilliam of the United Kingdom's National Wildlife Crime Unit, who's hell bent on protecting the world's birds of prey. The Falcon Thief whisks readers from the volcanoes of Patagonia to Zimbabwe's Matobo National Park, and from the frigid tundra near the Arctic Circle to luxurious aviaries in the deserts of Dubai, all in pursuit of a man who is reckless, arrogant, and gripped by a destructive compulsion to make the most beautiful creatures in nature his own. It's a story that's part true-crime narrative, part epic adventure—and wholly unputdownable until the very last page.

and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

mathematically rigorous way that is appealing to mathematicians. In addition, the authors explore many applications of game theory to biology, making the text useful to biologists as well. The book describes a wide range of topics in evolutionary games, including matrix games, replicator dynamics, the hawk-dove game, and the prisoner's dilemma. It covers the evolutionarily stable strategy, a key concept in biological games, and offers in-depth details of the mathematical models. Most chapters illustrate how to use MATLAB® to solve various games. Important biological phenomena, such as the sex ratio of so many species being close to a half, the evolution of cooperative behavior, and the existence of adornments (for example, the peacock's tail), have been explained using ideas underpinned by game theoretical modeling. Suitable for readers studying and working at the interface of mathematics and the life sciences, this book shows how evolutionary game theory is used in the modeling of these diverse biological phenomena.
