Minor Veterinary Surgery

This report is principally about the governance, structure and accountability of the veterinary profession as conferred by the Veterinary Surgeons Act 1966. The profession must meet modern day standards of quality of service, and have the

Online Library Veterinary Surgical Operations Veterinary Surgery Volume Iii

transparent and accountable disciplinary procedures demanded by the public. There is general agreement that aspects of the Act require modernisation, and that the disciplinary procedure is in urgent need of updating. But the Royal College of Veterinary Surgeons (RCVS) does not have the support of the majority of the profession for its proposals on compulsory practice standards and compulsory continuing professional development. The RCVS has not yet formulated a detailed plan for how a new Council might be structured. Nor is there a clear vision of how "para-professionals" and those administering complementary and alternative therapies to animals ought to be regulated under a new Act. The Department for Environment, Food and Rural Affairs has said that there is no funding available for work on a White Paper to update the Act until at least 2011. These next three years must be used by the profession as an opportunity to decide what it wants, and to iron out internal differences. The RCVS should analyse the costs of its proposals both for those practising and for the consumer. Any new Act should not overload the profession with unnecessary legislation, but it must safeguard the health and welfare of animals and also protect them, and their owners, from those who offer potentially dangerous treatments without sufficient knowledge or training.

Surgical and therapeutic use of lasers began in human medicine in the early 1960s. Technology and equipment advanced rapidly. Over the last ten years veterinarians have been exploring the many potential advantages that various lasers provide their patients. Because laser light energy can be applied directly to target tissue or administered to distant lesions at a remote site through fiberoptic components, laser surgery has become an invaluable and growing veterinary surgical resource. Unlike many medical technologies, the size, reliability, and portability of lasers have improved so rapidly that they are now both economically and practically feasible for the general and specialty veterinarian. Routine laser use in veterinary medicine stands poised to gain large-scale general acceptance for everyday routine and specialty procedures. Written by experts in the field, *Veterinary Laser Surgery: A Practical Guide* strives to help general and specialty veterinary practitioners understand, implement and expand the use of laser energy in safe and rational ways for both surgical and

therapeutic procedures to further improvement the veterinarians ability to enhance the patient's quality of life. PRACTICAL PICTORIAL GUIDE / ATLAS feature that includes 31 case studies of the most common laser surgery procedures.
