Sandworm

This work is a broad-ranging survey of high-rise architecture which touches on

many issues that define the character and social and economic role of this important building type. The history and theory of high-rise design, along with programmatic, structural, social, financial, operational, and urban issues are all covered in a comprehensive and insightful way.

Smart Card

This book for the first time gives an overall view of the current situation in urbanization of meteorological and air quality models around the world. It discusses and makes recommendations on the best practice and strategy for urbanization of different types of meteorological and air quality models. Based on the selected presentations given at the COST728 workshop, the contributions are arranged in four parts: urban morphology and databases; parameterizations of urban canopy; strategy for urbanization of different types of models; and evaluation and city case studies / field studies. The chapters treat either dynamic (on wind and turbulent) and thermal effects (on temperature and energy in general). The final chapter of this volume summarizes the discussion and conclusions from the four main topics and provides recommendations and future requirements. This monograph is oriented towards numerical weather prediction and air quality modelling communities.

High Rise--fire and Life Safety

Ambient Networks defines a new kind of network architecture, which embeds support for co operation and competition between diverse network types within a common control layer. This unified networking concept can adapt to the heterogeneous environments of different radio technologies and service and network environments. Special focus is placed on facilitating both competition and co-operation of various market players, by defining interfaces which allow the

instant negotiation of cooperation agreements. The Ambient Networking concept has been developed in the framework of the Ambient Networks project, which is co-sponsored by the European Union under the Information Society Technology (IST) priority of the 6th Framework Programme. The Ambient Networks project mobilised the work of researchers from over forty different organisations, both major industrial corporations and leading academic institutions, from Europe and worldwide. This book offers a complete and detailed overview of the Ambient Networking concept and its core technologies. The authors explain the problems with current mobile IP networks and the need for a new mobility-aware IP-based control architecture, before presenting the Ambient Networking concept itself and the business opportunities that it offers. The architecture, components, features and challenges of Ambient Networking are covered in depth, with comprehensive discussions of multi-radio access, generic Ambient Network signalling, mobility support, context and network management and built-in media delivery overlay control. Ambient Networks: Co-operative Mobile Networking for the Wireless World Explains the need for Ambient Networking, discussing the limitations of today's proposed architectures, and explaining the business potential of edge networks and network co-operation. Describes Ambient Networking technology in detail, and addresses the technical challenges for implementation. Includes practical user scenarios which are fully analysed and assessed through simulation studies. Including a complete examination of the research and technologies arising from the Ambient Networks concept, Ambient Networks will be invaluable for research

and development teams in networking and communications technology, as well as advanced students in electrical engineering and computer science faculties. Standardisation specialists, research departments, and telecommunications analysts will also find this a helpful resource.

Protection of Assets

Smart Card Developer's Kit is designed to provide the practical information you need to design and build applications that incorporate smart cards. Using a combination of detailed exposition, technical reference summaries, and extended examples, this book familiarizes you with the unique strengths and capabilities of this emerging computer technology. Increase your security from a one-factor security-a password-to a two-factor security-a smart card and its PIN. Use the smart card as a portable place to carry your personal preference information and your identity-establishing private signing key. In marketing applications, a smart card offers a much wider and more flexible set of customer benefits than a magnetic-strip card or a paper record card. A smart card can also carry secured information-such as medical records, licenses, subscriptions, and accreditations-

that must be guarded against tampering.

High-Rise Security and Fire Life Safety

From basic concepts to research grade material, Mobile Web 2.0: Developing and Delivering Services to Mobile Devices provides complete and up-to-date coverage of the range of technical topics related to Mobile Web 2.0. It brings together the work of 51 pioneering experts from around the world who identify the major challenges in Mobile Web 2.0 applications and provide authoritative insight into many of their own innovations and advances in the field. To help you address contemporary challenges, the text details a conceptual framework that provides modeling facilities for context-aware, multi-channel Web applications. It compares various platforms for developing mobile services—from the developer and user perspectives—and explains how to use high-level modeling constructs to drive the application development process through automatic code generation. Proposes an expanded model of mobile application context Explores mobile social software as an Information and Communications Technology (ICT) Discusses the effect of context on mobile usability Through empirical study, the book tests a number of hypotheses on the use of software implementation technology and location context in mobile applications. It introduces Reusable End-User Customization (REUC)—a technique that allows users to adapt the layout of Web pages and automatically reapplies those preferences on subsequent visits. It also investigates the need for

non-visual feedback with long system response times, particularly when downloading Web pages to mobile devices.

2019 Planner

High-Rise Security and Fire Life Safety, 3e, is a comprehensive reference for managing security and fire life safety operations within high-rise buildings. It spells out the unique characteristics of skyscrapers from a security and fire life safety perspective, details the type of security and life safety systems commonly found in them, outlines how to conduct risk assessments, and explains security policies and procedures designed to protect life and property. Craighead also provides guidelines for managing security and life safety functions, including the development of response plans for building emergencies. This latest edition clearly separates out the different types of skyscrapers, from office buildings to hotels to condominiums to mixed-use buildings, and explains how different patterns of use and types of tenancy impact building security and life safety. New to this edition: Differentiates security and fire life safety issues specific to: Office towers Hotels Residential and apartment buildings Mixed-use buildings Updated fire and life safety standards and guidelines Includes a CD-ROM with electronic versions of sample survey checklists, a sample building emergency management plan, and other security and fire life safety resources.

Meteorological and Air Quality Models for Urban Areas

This unique book brings together low-brow, potty-mouthed, cartoon humor and high-brow philosophical reflection to deliver an outrageously smart and entertaining exploration of one of TVs most unrelenting families.

Berkonomics

F. D. Ascoli

This repair manual covers Suzuki SV650 and SV650S 1999 to 2005.

2015 Asia Pacific Microwave Conference (Apmc)

This book presents the revised version of seven tutorials given at the NETWORKING 2002 Conference in Pisa, Italy in May 2002. The lecturers present a coherent view of the core issues in the following areas: - peer-to-peer computing and communications - mobile computing middleware - network security in the multicast framework - categorizing computing assets according to communication patterns - remarks on ad-hoc networking - communication through virtual technologies -

optical networks.

Recently, mobile security has garnered considerable interest in both the research community and industry due to the popularity of smartphones. The current smartphone platforms are open systems that allow application development, also for malicious parties. To protect the mobile device, its user, and other mobile ecosystem stakeholders such as network operators, application execution is controlled by a platform security architecture. This book explores how such mobile platform security architectures work. We present a generic model for mobile platform security architectures: the model illustrates commonly used security mechanisms and techniques in mobile devices and allows a systematic comparison of different platforms. We analyze several mobile platforms using the model. In addition, this book explains hardware-security mechanisms typically present in a mobile device. We also discuss enterprise security extensions for mobile platforms and survey recent research in the area of mobile platform security. The objective of this book is to provide a comprehensive overview of the current status of mobile platform security for students, researchers, and practitioners. Table of Contents: Preface / Introduction / Platform Security Model / Mobile Platforms / Platform Comparison / Mobile Hardware Security / Enterprise Security Extensions / Platform Security Research / Conclusions / Bibliography / Authors' Biographies

2011 IEEE 9th International New Circuits and Systems Conference (NEWCAS)

This title provides the reader with complete coverage of high-rise security and safety issues. It includes comprehensive sample documentation, diagrams and photographs to aid in developing security and fire life safety programs

Yamaha XT600 and MT-03 Service and Repair Manual

Early Revenue History of Bengal and the Fifth Report, 1812 was the outcome of a series of four lectures delivered at the Dacca College by the distinguished Bengali civil servant, F.D. Ascoli. It embodies the text of the Fifth Report on the affairs of the East India Company by the Select Committee of the House of Commons, appointed with a view to form the charter of 1813, and also careful and detailed summary of the discussions that led up to Lord Cornwallis's Permanent Revenue Settlement of Bengal (including Behar). The condensed arguments of Mr. James Grant, Sir John Shore and Lord Cornwallis on the subject of the Permanent Settlement enable us to see the objectives desired for in the Permanent Revenue Settlement. The book also affords valuable glimpses on the methods adopted for carrying out the settlement and working it successfully in the early days when the zamindars themselves did not look upon it as a boon, and the sale of estates for

arrears were frequent. Ascoli's excellent and dispassionate account of the Company's difficulties and the unsuccessful remedies that were from time to time applied to meet them, disposes of pet theories that are sometimes advanced with regard to the Permanent Settlement. Mr. Ascoli's masterly analysis and partial text of the Fifth Report from the Select Committee, 1812, will be of material assistance to students of revenue history in Bengal and of Colonial India generally. Please note: Taylor & Francis does not sell or distribute the Hardback in India, Pakistan, Nepal, Bhutan, Bangladesh and Sri Lanka e account of the Company's difficulties and the unsuccessful remedies that were from time to time applied to meet them, disposes of pet theories that are sometimes advanced with regard to the Permanent Settlement. The New York Times bestselling, darkly funny memoirof a young New Yorker's daring dual life—advertising art director by day,glitter-dripping drag queen and nightclub beauty-pageant hopeful by night—was asmash literary debut for Josh Kilmer-Purcell, now known for his popular PlanetGreen television series The Fabulous Beekman Boys.His story begins here—before the homemade goat milk soaps and hand-gatheredhoneys, before his memoir of the city mouse's move to the country, TheBucolic Plague—in I Am Not Myself These Days, with "plenty of dishy anecdotes and moments of tragi-camp delight" (WashingtonPost).

Suzuki SV650 and SV650S

Ambient Networks

Today there is much talk of a 'crisis of trust'; a crisis which is almost certainly genuine, but usually misunderstood. Trust: A History offers a new perspective on

the ways in which trust and distrust have functioned in past societies, providing an empirical and historical basis against which the present crisis can be examined, and suggesting ways in which the concept of trust can be used as a tool to understand our own and other societies. Geoffrey Hosking argues that social trust is mediated through symbolic systems, such as religion and money, and the institutions associated with them, such as churches and banks. Historically these institutions have nourished trust, but the resulting trust networks have tended to create quite tough boundaries around themselves, across which distrust is projected against outsiders. Hosking also shows how nation-states have been particularly good at absorbing symbolic systems and generating trust among large numbers of people, while also erecting distinct boundaries around themselves, despite an increasingly global economy. He asserts that in the modern world it has become common to entrust major resources to institutions we know little about, and suggests that we need to learn from historical experience and temper this with more traditional forms of trust, or become an ever more distrustful society, with potentially very destabilising consequences.

Hotels

Offers ideas on adapting to the cultural diversity of individuals in the workplace to build teamwork and improve relationships

Psychological Transactions

On 30 September 1938 Neville Chamberlain flew back to London from his meeting at Munich with the German Chancellor, Adolf Hitler. As he paused on the aircraft steps, he held aloft the piece of paper which bore both his and the Führer's signature, the promise that Britain and Germany would never go to war with one another again. He had returned bringing 'Peace with honour - Peace for our Time.' Drawing on a wealth of original archival material, David Faber sheds new light on this extraordinary story, tracing the key incidents leading up to the meeting at Munich and its immediate aftermath: Lord Halifax's ill-fated visit to Hitler; Chamberlain's secret negotiations with Mussolini, and the Berlin scandal that rocked Hitler's régime. He takes us to Vienna, to the Sudetenland, and to Prague. In Berlin, we witness Hitler inexorably preparing for war; and in London, we watch helplessly as Chamberlain makes one supreme effort after another to appease Hitler.

I Am Not Myself These Days

Valuing Diversity

APMC2005 will provide a broad forum for participants from both academia and industries to exchange information, share research results, and discuss collaborations in the fields of microwave, millimeter wave and even to the far infrared and optical waves

Trust and Conflict

Practical OpenCV is a hands-on project book that shows you how to get the best results from OpenCV, the open-source computer vision library. Computer vision is key to technologies like object recognition, shape detection, and depth estimation. OpenCV is an open-source library with over 2500 algorithms that you can use to do all of these, as well as track moving objects, extract 3D models, and overlay augmented reality. It's used by major companies like Google (in its autonomous car), Intel, and Sony; and it is the backbone of the Robot Operating System's computer vision capability. In short, if you're working with computer vision at all, you need to know OpenCV. With Practical OpenCV, you'll be able to: Get OpenCV up and running on Windows or Linux. Use OpenCV to control the camera board and run vision algorithms on Raspberry Pi. Understand what goes on behind the scenes in computer vision applications like object detection, image stitching, filtering, stereo vision, and more. Code complex computer vision projects for your class/hobby/robot/job, many of which can execute in real time on off-the-shelf processors. Combine different modules that you develop to create your own

interactive computer vision app.

Advanced Lectures on Networking

This comprehensive source covers all aspects of physical security including access control, training, employee awareness, internal and external theft and fraud, security and civil law, investigations, ethics, alcohol and drug abuse, and more. The four-volume Manual is intended for a wide readership. All business managers and protection professionals with an assets protection responsibility will find this information pertinent in each subject area, and helpful in effectively tackling critical security issues and organizing special research projects. Of particular significance are the various forms, matrices, and checklists that help give the reader a practical start toward application of the security theory relative to a specific situation. This manual also serves as a central library reference for students pursuing a program in security or assets protection.

Physical Security

This book offers students a uniquely concise, accessible and comprehensive introduction to hotel accommodation management that covers the range of managerial subjects and disciplines in the sector. The book focuses on enduring aspects of the accommodation management function (front office management, housekeeping, revenue management); the changing context of hotel accommodation provision (the move to 'asset light', the supply of accommodation, trends in hotel investment and asset management, the challenges engendered by social media and the collaborative economy to the hotel market); and the role of accommodation in additional and integrated facilities and markets (spas, resorts, MICE markets). International case studies illustrating examples of practice in the industry are integrated throughout, along with study questions and other features to aid understanding and problem solving. This is essential reading for all hospitality and hotel management students.

Introduction To Computers (Sie)

With Smart Card Programming the reader will have the expert guidance he need to work with smart cards. The book offers a comprehensive guide, to the technological aspects related to smart cards, providing an high level overview of the technological panorama and giving an in-depth technical coverage about the related architectures, programming paradigms and APIs. The first part of the book introduces the smart card technologies, the general concepts and a few case studies. It is addressed also to non-technical reader who wishes an high level overview on smart card world. The second part of the book is a technical guide to smart card specifications and programming paradigms. It dives into technical topics about smart card programming and applications development in C/C++, C#, Visual Basic and Java. Key features include: - Contact and Contactless Cards - ISO 7816 - NFC - JavaCard Framework - PC/SC - PKCS#11 - OpenCard Framework - Java - Smart Card I/O - GlobalPlatform - EMV

Family Guy and Philosophy

Android User Interface Development

Pelletizing of Iron Ores

The rapid development of wireless digital communication technology has cre ated capabilities that software systems are only beginning to exploit. The falling cost of both communication and of mobile computing devices (laptop computers, hand-held computers, etc.) is making wireless computing affordable not only to business users but also to consumers. Mobile computing is not a "scaled-down" version of the established and we- studied field of distributed computing. The nature of wireless communication media and the mobility of computers combine to create fundamentally new problems in networking, operating systems, and information systems. Further more, many of the applications envisioned for mobile computing place novel demands on software systems. Although mobile computing is still in its infancy, some basic concepts have been identified and several seminal experimental systems developed. This book includes a set of contributed papers that describe these concepts and sys tems. Other papers describe applications that are currently being deployed and tested. The first chapter offers an introduction to the field of mobile computing, a survey of technical issues, and a summary of the papers that comprise sub sequent chapters. We have chosen to reprint several key papers that appeared previously in conference proceedings. Many of the papers in this book are be ing published here for the first time. Of these new papers, some are expanded versions of papers first presented at the NSF-sponsored Mobidata Workshop on Mobile and Wireless Information Systems, held at Rutgers University on Oct 31 and Nov 1, 1994.

Hotel Accommodation Management

Quickly design and develop compelling user interfaces for your Android applications.

Lodging

Smart Card Programming

Trust, distrust and conflict between social groups have existed throughout the history of humankind, although their forms have changed. Using three main concepts: culture, representation and dialogue, this book explores and re-thinks some of these changes in relation to concrete historical and contemporary events. Part I offers a symbolic and historical analysis of trust and distrust while Parts II and III examine trust, distrust and conflict in specific events including the Cyprus conflict, Estonian collective memories, coping with HIV/AIDS in China, Swedish asylum seekers, the Cuban missile crisis and Stalinist confessions. With an impressive array of international contributors the chapters draw on a number of key concepts such as self and other, ingroup and outgroup, contact between groups, categorization, brinkmanship, knowledge, beliefs and myth. Trust and

Conflict offers a fresh perspective on the problems that arise from treating trust, distrust and conflict as simplified indicators. Instead, it proposes that human and social sciences can view these phenomena within the complex matrix of interacting perspectives and meta-perspectives that characterise the social world. As such it will be of interest to undergraduates, postgraduates and lecturers of human and social sciences especially social psychology, sociology, political science and communication studies.
