The Innovator's Book

Read Free Window On Humanity A Concise Introduction To General Anthropology

A systems-based approach to physical geography written in an easy-to-understand narrative style that is closely integrated with clear, single-concept illustrations.

Sanapia

Written by a prominent scholar in the field, Conrad Phillip Kottak, this concise, student-friendly, current introduction to general anthropology carefully balances coverage of core topics and contemporary changes in the field. New to this edition, Connect Anthropology offers a variety of learning tools and activities to make learning more engaging for students and teaching more efficient for instructors. Window on Humanity is a perfect match for general anthropology courses that use readings or ethnographies along with a main text.

Window on Humanity

You don't have to be a computer scientist to get involved in the discussion about where artificial intelligence and technology are going. What will the year 2084 hold for you--for your friends, for your family, and for our society? Are we doomed to the grim dystopia imagined in George Orwell's 1984? In 2084, scientist and philosopher John Lennox will introduce you to a kaleidoscope of ideas: the key developments in technological enhancement, bioengineering, and, in particular,

Read Free Window On Humanity A Concise Introduction To General Anthropology

artificial intelligence. You will discover the current capacity of AI, its advantages and disadvantages, the facts and the fiction, as well as potential future implications. The questions posed by AI are open to all of us. And they demand answers. A book that is written to challenge all readers, no matter your worldview, 2084 shows how the Christian worldview, properly understood, can provide evidence-based, credible answers that will bring you real hope for the future of humanity.

Cultural Anthropology: 101

One of the most widely used ethnographies published in the last twenty years, this Margaret Mead Award winner has been used as required reading at more than 600 colleges and universities. This personal account by a biocultural anthropologist illuminates not-soon-forgotten messages involving the sobering aspects of fieldwork among malnourished children in West Africa. With nutritional anthropology at its core, *Dancing Skeletons* presents informal, engaging, and oftentimes dramatic stories that relate the author's experiences conducting research on infant feeding and health in Mali. Through fascinating vignettes and

Read Free Window On Humanity A Concise Introduction To General Anthropology

honest, vivid descriptions, Dettwyler explores such diverse topics as ethnocentrism, culture shock, population control, breastfeeding, child care, the meaning of disability and child death in different cultures, female circumcision, women's roles in patrilineal societies, the dangers of fieldwork, and facing emotionally draining realities. Readers will laugh and cry as they meet the author's friends and informants, follow her through a series of encounters with both peri-urban and rural Bambara culture, and struggle with her as she attempts to reconcile her very different roles as objective ethnographer, subjective friend, and mother in the field. The 20th Anniversary Edition includes a 13-page "Q&A with the Author" in which Dettwyler responds to typical questions she has received individually from students who have been assigned *Dancing Skeletons* as well as audience questions at lectures on various campuses. The new 23-page "Update on Mali, 2013" chapter is a factual update about economic and health conditions in Mali as well as a brief summary of the recent political unrest.

Human Genetics: The Basics

Creating Regenerative Cities

Written by one of the prominent scholars in the field, this concise, up-to-date text

Read Free Window On Humanity A Concise Introduction To General Anthropology

provides a carefully balanced introduction to core topics in the four subfields of general anthropology--physical anthropology, archeology, linguistics, and cultural anthropology--as well as contemporary changes in the field. Since no single or monolithic theoretical perspective orients this book, instructors with a wide range of views and approaches can use it effectively. The combination of brevity and readability make Window on Humanity a perfect match for general anthropology courses that use readings or ethnographies along with a main text.

The Neuropsychology of Asian Americans

"Insects are the most species-rich and important organisms on earth, and that's why there are many university courses dedicated to the topic of Insects and Society. But, surprisingly, this is the first textbook specifically created for those courses. The content in this textbook is not only ideal for introductory courses, but it also is great for K12 instructors, insatiably curious children, and indeed anyone fascinated by insects and their impact on people." – Robert K. D. Peterson, Ph.D., Professor of Entomology, Montana State University and Past President, Entomological Society of America "Society is undervaluing the role of insects as pivotal drivers of ecosystem functioning and services. Addressing this deficit is a major merit of this book." – Teja Tscharntke, Professor and Head of the Agroecology Research Group at the University of Göttingen, Germany Insects are all around us, outweighing humanity by 17 times. Many are nuisances; they

Read Free Window On Humanity A Concise Introduction To General Anthropology

compete with us for food and carry some of our most devastating diseases. Many common pests have been transported worldwide by humans. Yet, some recent reports suggest dramatic declines in some important groups, such as pollinators and detritivores. Should we care? Yes, we should. Without insect pollinators we'd lose 35% of our global food production; without detritivores, we would be buried in un-decayed refuse. Insects are also critical sources for nutritional, medical and industrial products. A world without insects would seem a very different and unpleasant place. So why do insects inspire such fear and loathing? This concise, full-color text challenges many entrenched perceptions about insect effects on our lives. Beginning with a summary of insect biology and ecology that affect their interactions with other organisms, it goes on to describe the various positive and negative ways in which insects and humans interact. The final chapters describe factors that affect insect abundance and approaches to managing insects that balance their impacts. The first textbook to cater directly to those studying Insect and Society or Insect Ecology modules, this book will also be fascinating reading for anyone interested in learning how insects affect human affairs and in applying more sustainable approaches to "managing" insects. This includes K-12 teachers, undergraduate students, amateur entomologists, conservation practitioners, environmentalists, as well as natural resource managers, land use planners and environmental policy makers.

Sapiens

Most young students of American culture believe many of the cultural assumptions they grow up with are universal. As insiders, speaking a common language, following the accepted patterns of behavior embedded in a particular way of life, most of us take our own social actions for granted, and it is a challenge to realize the strangeness and wonder of our own behaviors. The distinct aim of each edition of this popular classroom supplement has been to enable students to better understand themselves by casting American culture into sharper relief—offering other mirrors, other reflections. The latest edition's twenty-one personalized narratives, of which seven are new, unveil fresh portrayals of American culture. Each contribution offers unique ethnographic perspectives of various aspects of American culture that enable us to better understand ourselves.

Crime

This concise and accessible introduction establishes the relevance of cultural anthropology for the modern world through an integrated, ethnographically informed approach. The book develops readers' understanding and engagement by addressing key issues such as: What it means to be human The key

This volume is the first comprehensive resource to assist neuropsychologists to provide culturally competent services to Asian Americans. It highlights pertinent historical socio-cultural characteristics of the largest Asian American ethnic groups, which helps to conceptualize presentation, provide an optimal environment for test administration, interpret tests within a cultural context, and offer culturally sensitive feedback and recommendations. In addition, the volume gives a summary of the available neuropsychological literature for each Asian American ethnic group, recommendations for testing, and illustrative case samples. The second purpose of the volume is to provide a glimpse of how neuropsychology is

Read Free Window On Humanity A Concise Introduction To General Anthropology

currently practiced in different Asian countries, by reviewing the neuropsychological literature and by listing the available resources. This information gives valuable insights to neuropsychologists working with Asian communities throughout the world. Neuropsychology of Asian Americans is an essential resource for clinical neuropsychologists and school psychologists who perform neuropsychological services to Asians. It is also an important resource for academic neuropsychologists and students with Asians in their sample, as cultural variables may have moderating effects on data that information in this book helps to elucidate.

Distant Mirrors

This concise edited collection explores the practice of peace journalism in East Africa, focusing specifically on the unique political and economic contexts of Uganda and Kenya. The book offers a refreshing path towards transformative journalism in East Africa through imbibing pan-African institutional methodological approaches and the African philosophies of Utu (humanity), Umoja (unity) and Harambee (collective responsibility) as news values. Contributions from key academics demonstrate how media practices that are supportive of peace can prevent the escalation of conflict and promote its nonviolent resolution. The chapters cumulatively represent a rich repertoire of experiences and cases that skillfully tell the story of the connections between media and peacebuilding in East Africa, while also avoiding romanticizing peace journalism as an end to itself or using it as an excuse for censorship. This cutting-edge research book is a valuable resource for academics in journalism, media studies, communication, peace and conflict studies, and sociology.

Read Free Window On Humanity A Concise Introduction To General Anthropology

Anthropology: Appreciating Human Diversity

Anthropology is the study of all humans in all times in all places. But it is so much more than that. "Anthropology requires strength, valor, and courage," Nancy Scheper-Hughes noted. "Pierre Bourdieu called anthropology a combat sport, an extreme sport as well as a tough and rigorous discipline. It teaches students not to be afraid of getting one's hands dirty, to get down in the dirt, and to commit yourself, body and mind. Susan Sontag called anthropology a "heroic" profession." What is the payoff for this heroic journey? You will find ideas that can carry you across rivers of doubt and over mountains of fear to find the the light and life of places forgotten. Real anthropology cannot be contained in a book. You have to go out and feel the world's jagged edges, wipe its dust from your brow, and at times, leave your blood in its soil. In this unique book, Dr. Michael Wesch shares many of his own adventures of being an anthropologist and what the science of human beings can tell us about the art of being human. This special first draft edition is a loose framework for more and more complete future chapters and writings. It serves as a companion to anth101.com, a free and open resource for instructors of cultural anthropology. This 2018 text is a revision of the "first draft edition" from 2017 and includes 7 new chapters.

Mirror for Humanity

Read Free Window On Humanity A Concise Introduction To General Anthropology

Climate change: it is arguably the most urgent and consequential issue humankind has ever faced. How we address it in the next thirty years will determine the kind of world we will live in and will bequeath to our children and to theirs. In *The Future We Choose*, Christiana Figueres and Tom Rivett-Carnac--who led negotiations for the United Nations during the historic Paris Agreement of 2015--have written a cautionary but optimistic book about the world's changing climate and the fate of humanity. The authors outline two possible scenarios for our planet. In one, they describe what life on Earth will be like by 2050 if we fail to meet the Paris climate targets. In the other, they lay out what it will be like to live in a carbon neutral, regenerative world. They argue for confronting the climate crisis head-on, with determination and optimism. *The Future We Choose* presents our options and tells us what governments, corporations, and each of us can and must do to fend off disaster.

Physical Geography

Intrigued by a slide showing a woman breast-feeding a monkey, anthropologist Loretta A. Cormier spent fifteen months living among the Guajá, a foraging people in a remote area of Brazil. The result is this ethnographic study of the extraordinary relationship between the Guajá Indians and monkeys. While monkeys are a key food source for the Guajá, certain pet monkeys have a quasi-human status. Some infant monkeys are adopted and nurtured as human children

Read Free Window On Humanity A Concise Introduction To General Anthropology

while others are consumed in accordance with the "symbolic cannibalism" of their belief system. The apparent contradiction of this predator/protector relationship became the central theme of Cormier's research: How can monkeys be both eaten as food and nurtured as children? Her research reveals that monkeys play a vital role in Guajá society, ecology, economy, and religion. In Guajá animistic beliefs, all forms of plant and animal life—especially monkeys—have souls and are woven into a comprehensive kinship system. Therefore, all consumption can be considered a form of cannibalism. Cormier sets the stage for this enlightening study by examining the history of the Guajá and the ecological relationships between human and nonhuman primates in Amazonia. She also addresses the importance of monkeys in Guajá ecological adaptation as well as their role in the Guajá kinship system. Cormier then looks at animism and life classification among the Guajá and the role of pets, which provide a context for understanding "symbolic cannibalism" and how the Guajá relate to various forms of life in their natural and supernatural world. The book concludes with a discussion of the implications of ethnoprimateology beyond Amazonia, including Western perceptions of primates.

The Art of Being Human

Looseleaf Window on Humanity

Read Free Window On Humanity A Concise Introduction To General Anthropology

WINNER OF THE PULITZER PRIZE From the highly acclaimed, multiple award-winning Anthony Doerr, the beautiful, stunningly ambitious instant New York Times bestseller about a blind French girl and a German boy whose paths collide in occupied France as both try to survive the devastation of World War II. Marie-Laure lives with her father in Paris near the Museum of Natural History, where he works as the master of its thousands of locks. When she is six, Marie-Laure goes blind and her father builds a perfect miniature of their neighborhood so she can memorize it by touch and navigate her way home. When she is twelve, the Nazis occupy Paris and father and daughter flee to the walled citadel of Saint-Malo, where Marie-Laure's reclusive great-uncle lives in a tall house by the sea. With them they carry what might be the museum's most valuable and dangerous jewel. In a mining town in Germany, the orphan Werner grows up with his younger sister, enchanted by a crude radio they find. Werner becomes an expert at building and fixing these crucial new instruments, a talent that wins him a place at a brutal academy for Hitler Youth, then a special assignment to track the resistance. More and more aware of the human cost of his intelligence, Werner travels through the heart of the war and, finally, into Saint-Malo, where his story and Marie-Laure's converge. Doerr's "stunning sense of physical detail and gorgeous metaphors" (San Francisco Chronicle) are dazzling. Deftly interweaving the lives of Marie-Laure and Werner, he illuminates the ways, against all odds, people try to be good to one another. Ten years in the writing, a National Book Award finalist, *All the Light We Cannot See* is a magnificent, deeply moving novel from a writer "whose sentences

Read Free Window On Humanity A Concise Introduction To General Anthropology

never fail to thrill” (Los Angeles Times).

Creating Future People

Large, modern cities have effectively declared their independence from nature. But while they take up only three percent of the world’s land surface, their ecological footprints actually cover the entire globe. Humanity is building an urban future, yet urban resource use is threatening the future of humanity and the natural world. To meet the aspirations of city people in both developing and developed countries, bold new initiatives are needed. Modern cities are an astonishing human achievement. As centres of innovation they are humanity’s cultural playgrounds. Their communication and transport systems have developed a global reach. They are attractive to investors because they can offer a vast variety of services at comparatively low per-capita costs. But are they viable as ecological systems? The planning of new cities, as well as the retrofit of existing cities, needs to undergo a profound paradigm shift. Mere 'sustainable development' is not enough. To be compatible with natural systems, cities need to move away from linear systems of resource use and learn to operate as closed-loop, circular systems. To ensure their long-term future, they need to develop an environmentally enhancing, restorative relationship between themselves and the natural systems on which they still depend. *Creating Regenerative Cities* is a concise, solution-oriented manual for creating regenerative urbanisation. A wide range of technical, management and

Read Free Window On Humanity A Concise Introduction To General Anthropology

policy solutions already exist, but implementation has been too slow and too little, in large part because the kinds of holistic approaches needed are still unfamiliar to fragmented and process-driven urban policy making and governance. Herbert Girardet's 30 years' experience as an ecologist, thinker, film maker and consultant working around the world has created this unique combination of tried and tested best practices and policies, which outlines the fundamental shifts needed in the way we think about our cities.

Peace Journalism in East Africa

This concise, student-friendly, current introduction to general anthropology carefully balances coverage of core topics and contemporary changes in the field. Window on Humanity is a perfect match for general anthropology courses that use readings or ethnographies along with a main text.

Kinship with Monkeys

New York Times Bestseller A Summer Reading Pick for President Barack Obama, Bill Gates, and Mark Zuckerberg From a renowned historian comes a groundbreaking narrative of humanity's creation and evolution—a #1 international bestseller—that explores the ways in which biology and history have defined us

Read Free Window On Humanity A Concise Introduction To General Anthropology

and enhanced our understanding of what it means to be “human.” One hundred thousand years ago, at least six different species of humans inhabited Earth. Yet today there is only one—homo sapiens. What happened to the others? And what may happen to us? Most books about the history of humanity pursue either a historical or a biological approach, but Dr. Yuval Noah Harari breaks the mold with this highly original book that begins about 70,000 years ago with the appearance of modern cognition. From examining the role evolving humans have played in the global ecosystem to charting the rise of empires, *Sapiens* integrates history and science to reconsider accepted narratives, connect past developments with contemporary concerns, and examine specific events within the context of larger ideas. Dr. Harari also compels us to look ahead, because over the last few decades humans have begun to bend laws of natural selection that have governed life for the past four billion years. We are acquiring the ability to design not only the world around us, but also ourselves. Where is this leading us, and what do we want to become? Featuring 27 photographs, 6 maps, and 25 illustrations/diagrams, this provocative and insightful work is sure to spark debate and is essential reading for aficionados of Jared Diamond, James Gleick, Matt Ridley, Robert Wright, and Sharon Moalem.

WINDOW ON HUMANITY

Deleuze's two Cinema books explore film through the creation of a series of

Read Free Window On Humanity A Concise Introduction To General Anthropology

philosophical concepts. Not only bewildering in number, Deleuze's writing procedures mean his exegesis is both complex and elusive. Three questions emerge: What are the underlying principles of the taxonomy? How many concepts are there, and what do they describe? How might each be used in engaging with a film? David Deamer's book is the first to fully respond to these three questions, unearthing the philosophies inspiring Deleuze's classifications, exploring every concept and reading a film for each. Clearly and concisely mapping the Cinema books for newcomers to Deleuzian film studies, Deamer also opens up new areas of enquiry for expert readers.

The Brief Wondrous Life of Oscar Wao

Creating Future People offers readers a fast-paced primer on how new genetic technologies will enable parents to influence the traits of their children, including their intelligence, moral capacities, physical appearance, and immune system. It deftly explains the science of gene editing and embryo selection, and raises the central moral questions with colorful language and a brisk style. Jonathan Anomaly takes seriously the diversity of preferences parents have, and the limits of public policy in regulating what could soon be a global market for reproductive technology. He argues that once embryo selection for complex traits happens it will change the moral landscape by altering the incentives parents face. All of us will take an interest in the traits everyone else selects, and this will present

Read Free Window On Humanity A Concise Introduction To General Anthropology

coordination problems that previous writers on genetic enhancement have failed to consider. Anomaly navigates difficult ethical issues with vivid language and scientifically informed speculation about how genetic engineering will transform humanity. Key features: Offers clear explanations of scientific concepts; Explores important moral questions without academic jargon; Brings discoveries from different fields together to give us a sense of where humanity is headed.

“Amid the ugly realities of contemporary America, American Hate affirms our courage and inspiration, opening a roadmap to reconciliation by means of the victims' own words.” —NPR Books “The collection offers possible solutions for how people, on their own or working with others, can confront hate.” —San Francisco Chronicle A San Francisco Chronicle Books Pick One of Bitch Media's “13 Books Feminists Should Read in August” One of Paste Magazine's “The 10 Best Books of August 2018” A moving and timely collection of testimonials from people impacted by hate before and after the 2016 presidential election In *American Hate: Survivors Speak Out*, Arjun Singh Sethi, a community activist and civil rights lawyer, chronicles the stories of individuals affected by hate. In a series of powerful, unfiltered testimonials, survivors tell their stories in their own words and describe

Read Free Window On Humanity A Concise Introduction To General Anthropology

how the bigoted rhetoric and policies of the Trump administration have intensified bullying, discrimination, and even violence toward them and their communities. We hear from the family of Khalid Jabara, who was murdered in Tulsa, Oklahoma, in August 2016 by a man who had previously harassed and threatened them because they were Arab American. Sethi brings us the story of Jeanette Vizguerra, an undocumented mother of four who took sanctuary in a Denver church in February 2017 because she feared deportation under Trump's cruel immigration enforcement regime. Sethi interviews Taylor Dumpson, a young black woman who was elected student body president at American University only to find nooses hanging across campus on her first day in office. We hear from many more people impacted by the Trump administration, including Native, black, Arab, Latinx, South Asian, Southeast Asian, Muslim, Jewish, Sikh, undocumented, refugee, transgender, queer, and people with disabilities. A necessary book for these times, *American Hate* explores this tragic moment in U.S. history by empowering survivors whose voices white supremacists and right-wing populist movements have tried to silence. It also provides ideas and practices for resistance that all of us can take to combat hate both now and in the future.

Pale Rider

Crime: Local and Global and its sister text Criminal Justice: Local and Global are two new teaching texts that aim to equip the reader with a critical understanding

Read Free Window On Humanity A Concise Introduction To General Anthropology

of the globally contested nature of 'crime' and 'justice'. Through an examination of key concepts and criminological approaches, the books illuminate the different ways in which crime is constructed, conceived and controlled. International case studies are used to demonstrate how 'crime' and 'justice' are historically and geographically located in terms of the global/local context, and how processes of criminalisation and punishment are mediated in contemporary societies. Crime: Local and Global covers the way local events (such as prostitution) have wider aspects than previously thought. Links with people traffickers, international organised crime and violence cannot be ignored any longer. Each crime or area of activity selected within this text has a global reach, and is made ever more possible due to the way globalisation has opened up markets, both legitimate and illegitimate. The book's approach and scope emphasises that we can no longer view 'crime' as something which occurs within certain jurisdictions, at certain times and in particular places. For example, the chapter on cybercrime highlights the 'illegal' acts that can be perpetrated by second lifers, anywhere in the world, but are they a crime?

Focused on the appreciation of anthropology, the new edition of Anthropology: Appreciating Human Diversity offers an up-to-date holistic introduction to general anthropology from the four-field perspective. Key themes of appreciating the experiences students bring to the classroom, appreciating human diversity, and appreciating the field of anthropology are showcased throughout the text. In this edition, Understanding Ourselves chapter openers and Through the Eyes of Others boxes show how anthropology helps us understand ourselves. New Appreciating Diversity boxes focus on the various forms of human biological and cultural diversity. Appreciating Anthropology boxes are also new to the text and focus on the value and usefulness of anthropological research and approaches.

Encyclopedia of Food Security and Sustainability

Read Free Window On Humanity A Concise Introduction To General Anthropology

In 1918, the Italian-Americans of New York, the Yupik of Alaska and the Persians of Mashed had almost nothing in common except for a virus--one that triggered the worst pandemic of modern times and had a decisive effect on the history of the twentieth century. The Spanish flu of 1918-1920 was one of the greatest human disasters of all time. It infected a third of the people on Earth--from the poorest immigrants of New York City to the king of Spain, Franz Kafka, Mahatma Gandhi and Woodrow Wilson. But despite a death toll of between 50 and 100 million people, it exists in our memory as an afterthought to World War I. In this gripping narrative history, Laura Spinney traces the overlooked pandemic to reveal how the virus travelled across the globe, exposing mankind's vulnerability and putting our ingenuity to the test. As socially significant as both world wars, the Spanish flu dramatically disrupted--and often permanently altered--global politics, race relations and family structures, while spurring innovation in medicine, religion and the arts. It was partly responsible, Spinney argues, for pushing India to independence, South Africa to apartheid and Switzerland to the brink of civil war. It also created the true "lost generation." Drawing on the latest research in history, virology, epidemiology, psychology and economics, Pale Rider masterfully recounts the little-known catastrophe that forever changed humanity.
